

Android Studio Basics

Creating First Application

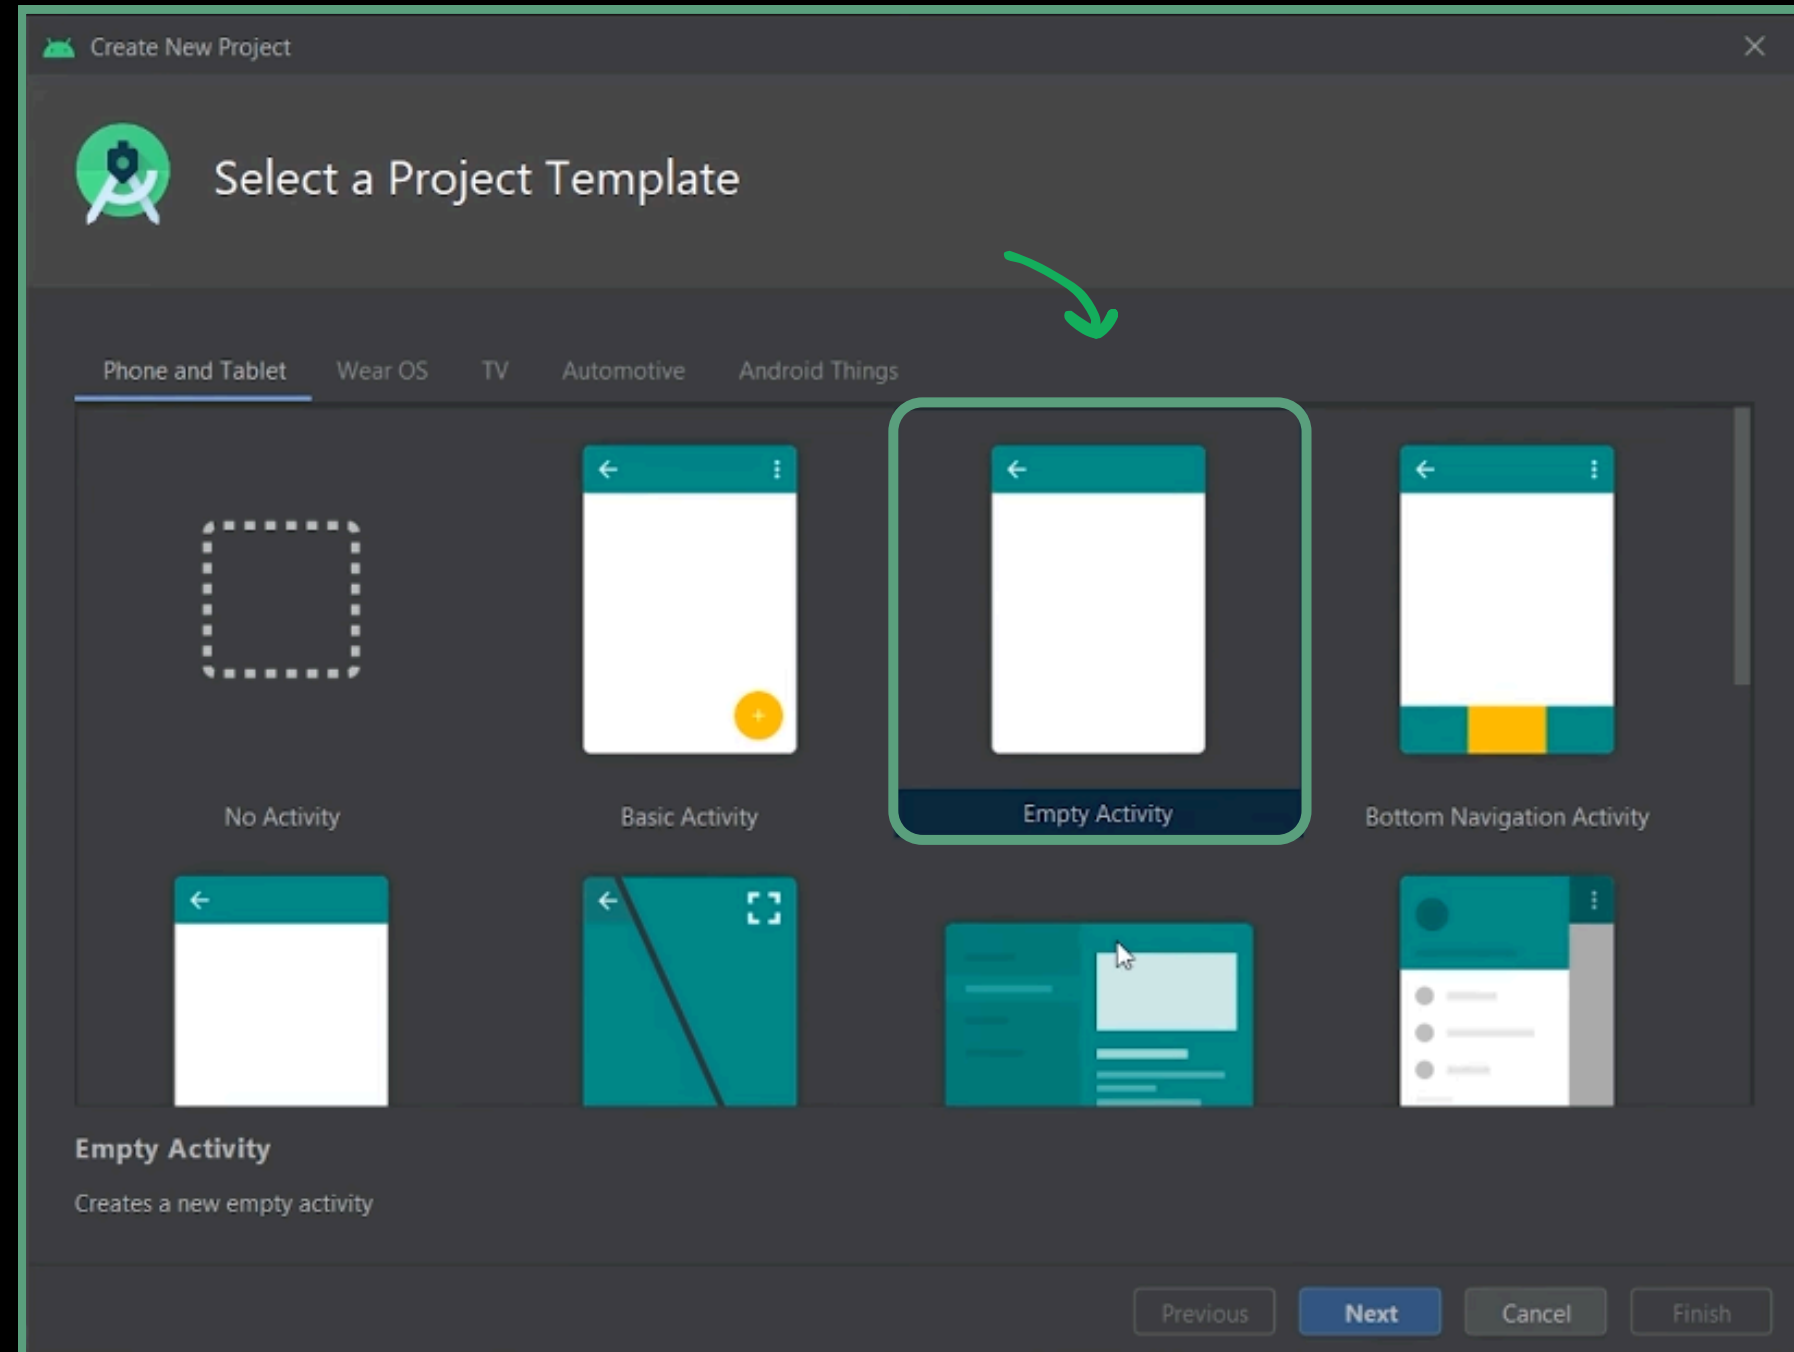

Open Android Studio

- Create a new Project

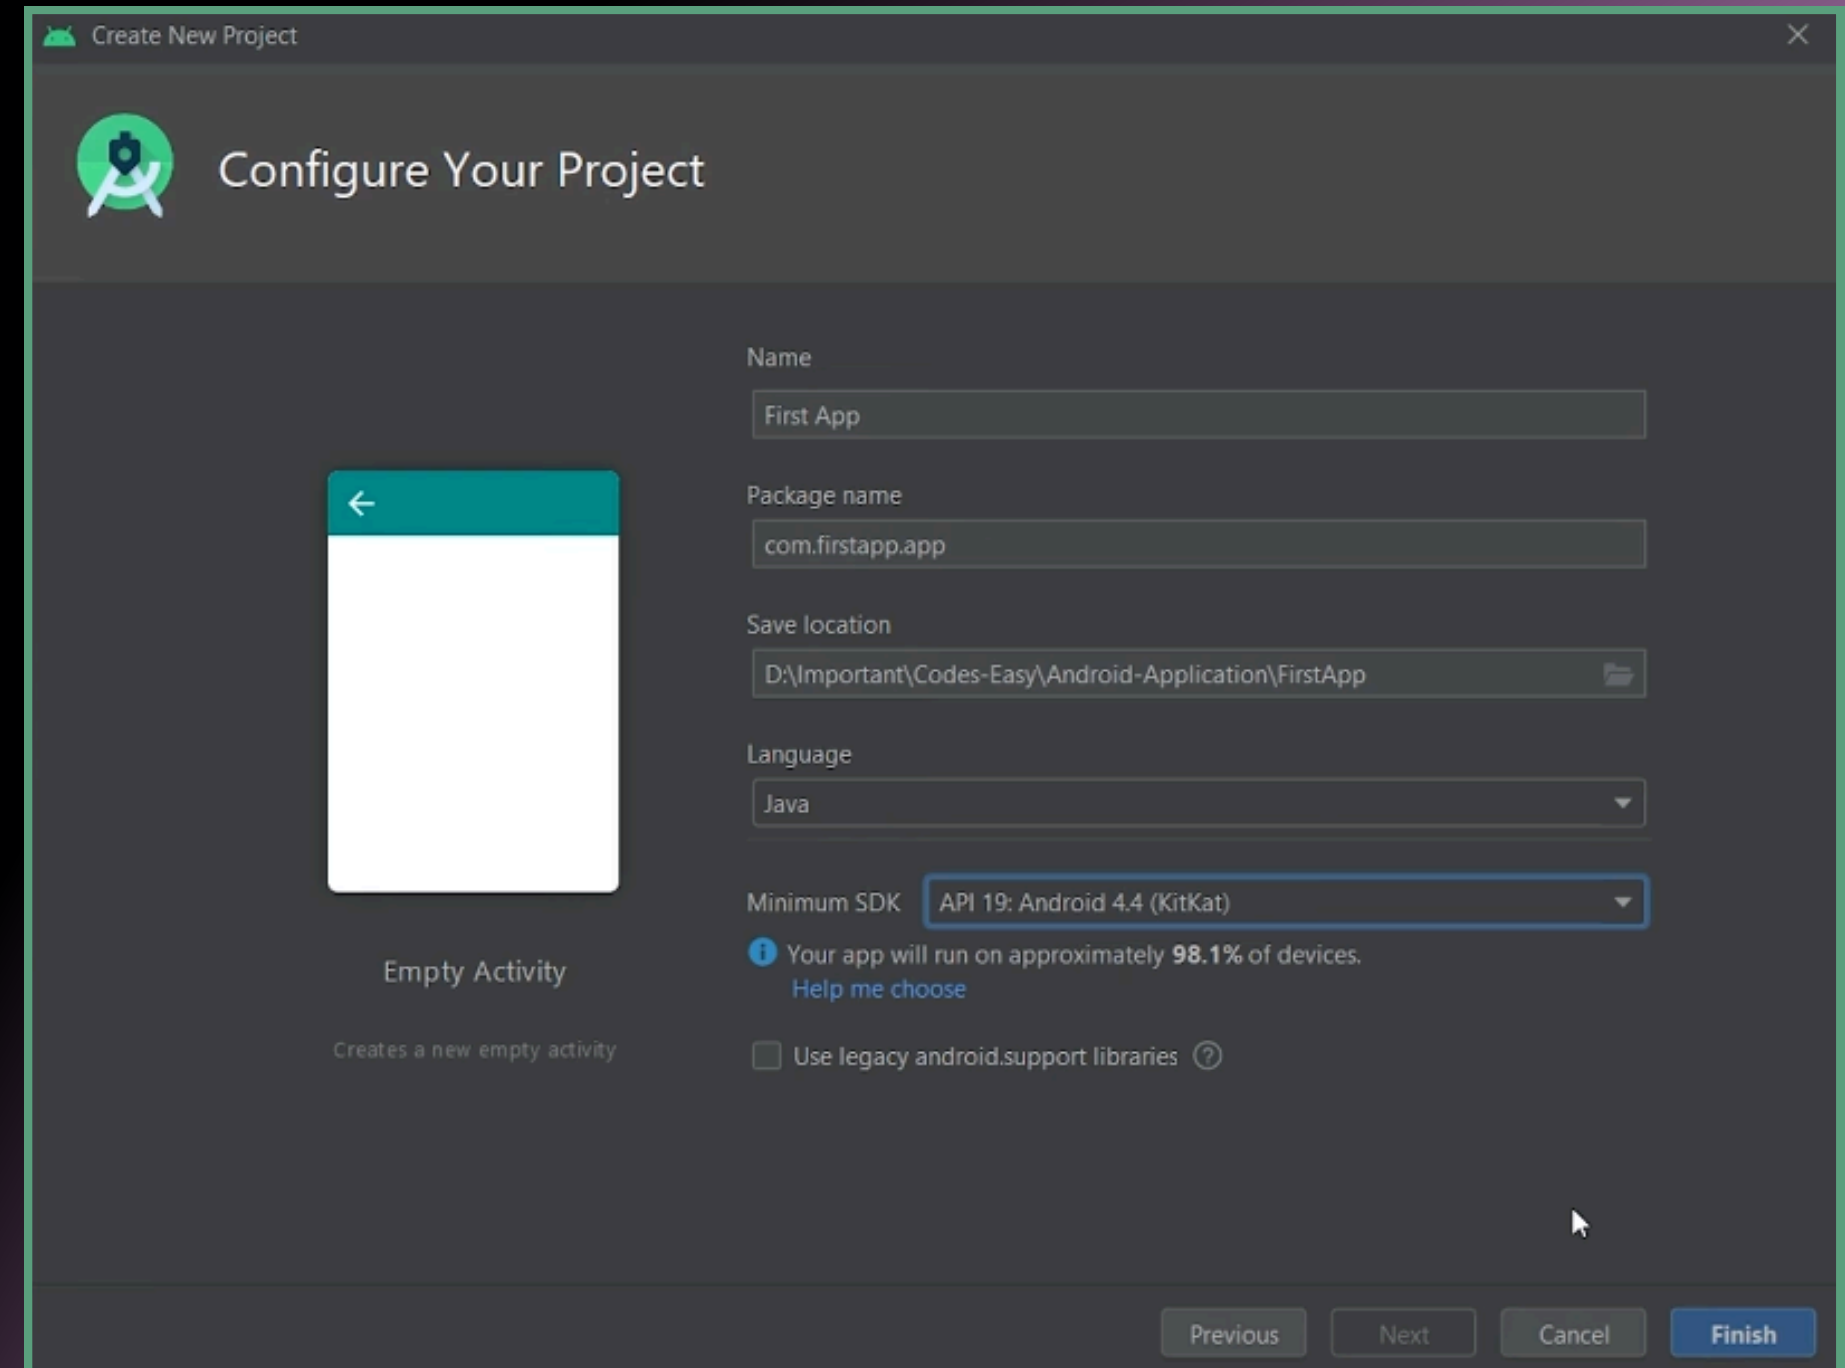

Select Project Template

- For this time, select Empty Activity (Blank Canvas)
- You can select any project template that suits to your needs

Configure Project

- You can change the name of your project and the package name of it if you want to
- You can change the Language that you want to use (Java, Kotlin)
- Can leave the Minimum SDK as default

The screenshot shows the 'Configure Your Project' dialog box in Android Studio. The dialog is titled 'Create New Project' and 'Configure Your Project'. It features a preview of an 'Empty Activity' on the left, which is a simple white screen with a teal header bar containing a back arrow. Below the preview, it says 'Empty Activity' and 'Creates a new empty activity'. On the right, there are several configuration fields: 'Name' (First App), 'Package name' (com.firstapp.app), 'Save location' (D:\Important\Codes-Easy\Android-Application\FirstApp), 'Language' (Java), and 'Minimum SDK' (API 19: Android 4.4 (KitKat)). Below these fields, there is a blue information icon and text stating 'Your app will run on approximately 98.1% of devices.' with a link 'Help me choose'. There is also a checkbox for 'Use legacy android.support libraries' which is currently unchecked. At the bottom right, there are four buttons: 'Previous', 'Next', 'Cancel', and 'Finish'.

Create New Project

Configure Your Project

Name
First App

Package name
com.firstapp.app

Save location
D:\Important\Codes-Easy\Android-Application\FirstApp

Language
Java

Minimum SDK
API 19: Android 4.4 (KitKat)

Empty Activity
Creates a new empty activity

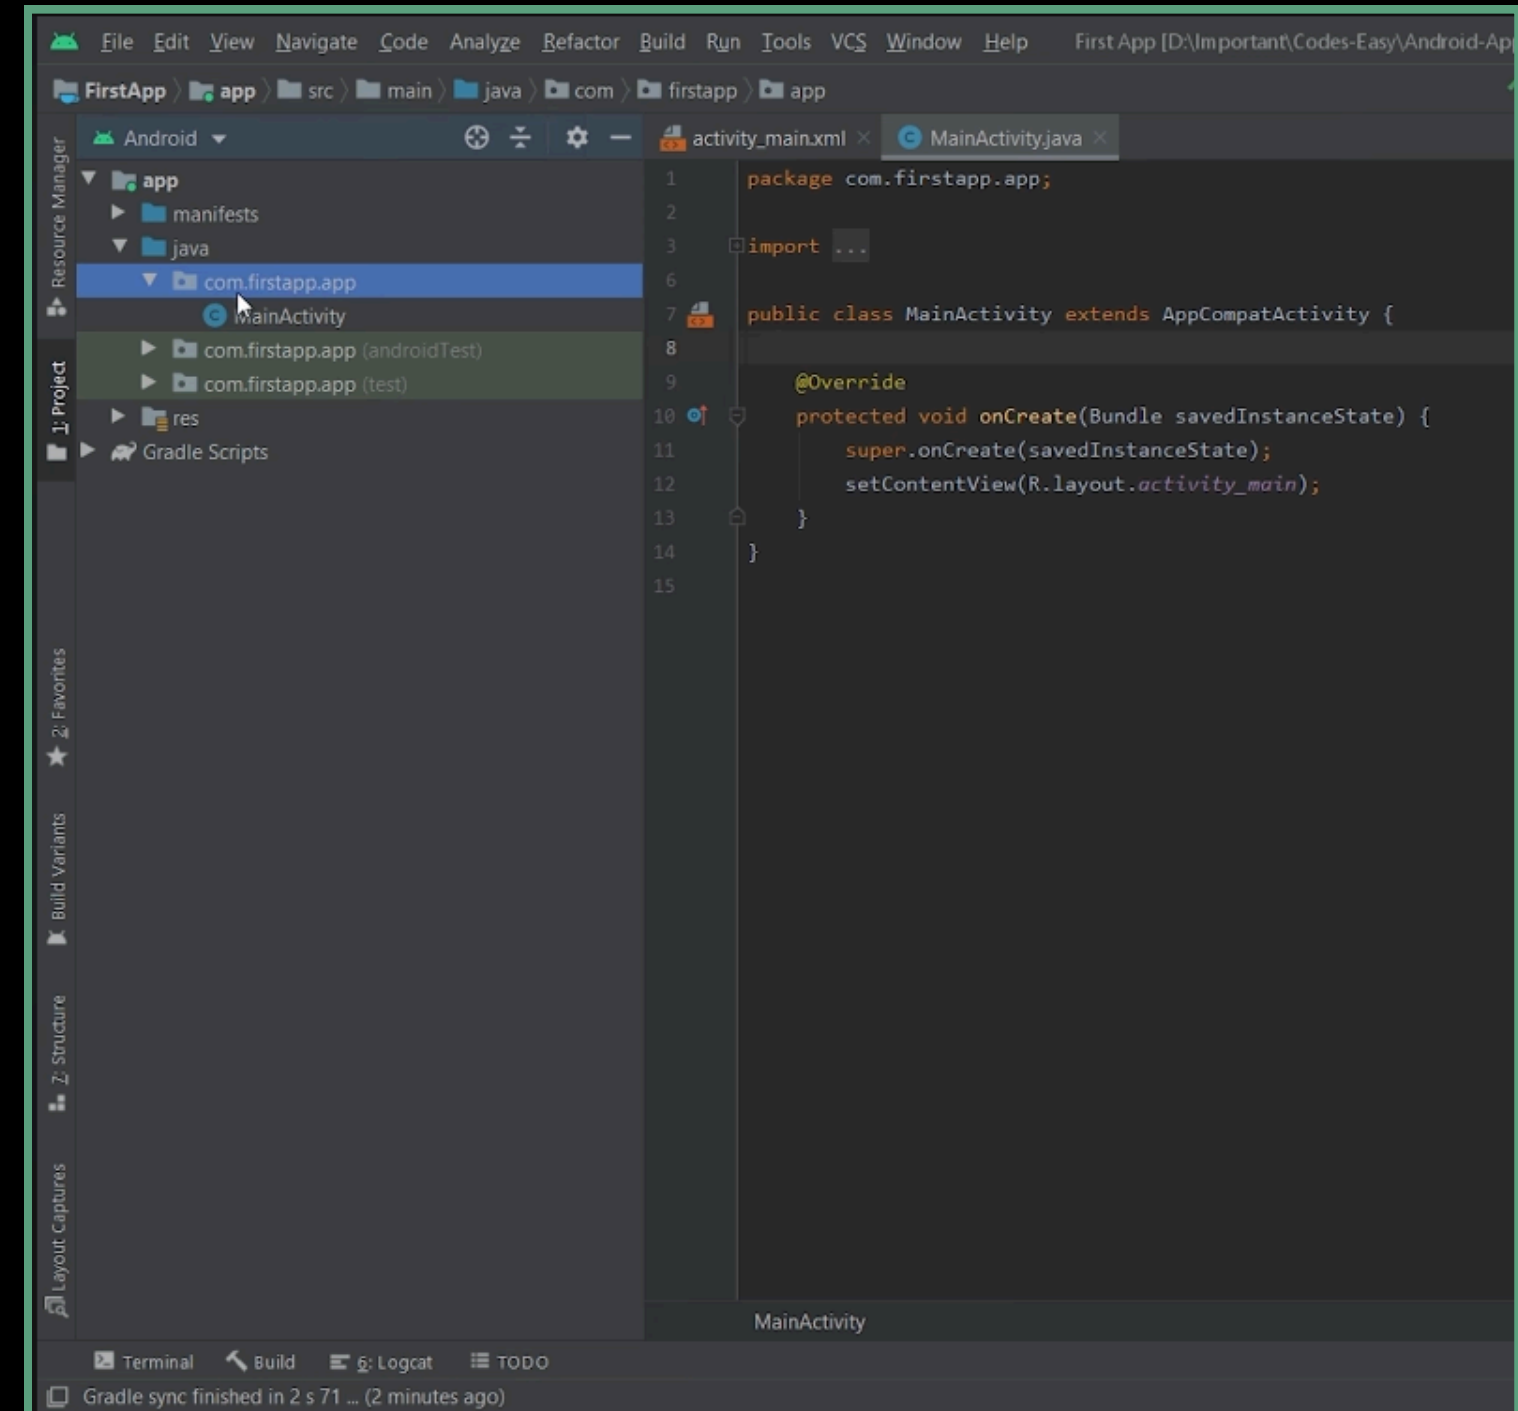

Information icon: Your app will run on approximately 98.1% of devices. [Help me choose](#)

☐ Use legacy android.support libraries ?

Previous Next Cancel Finish

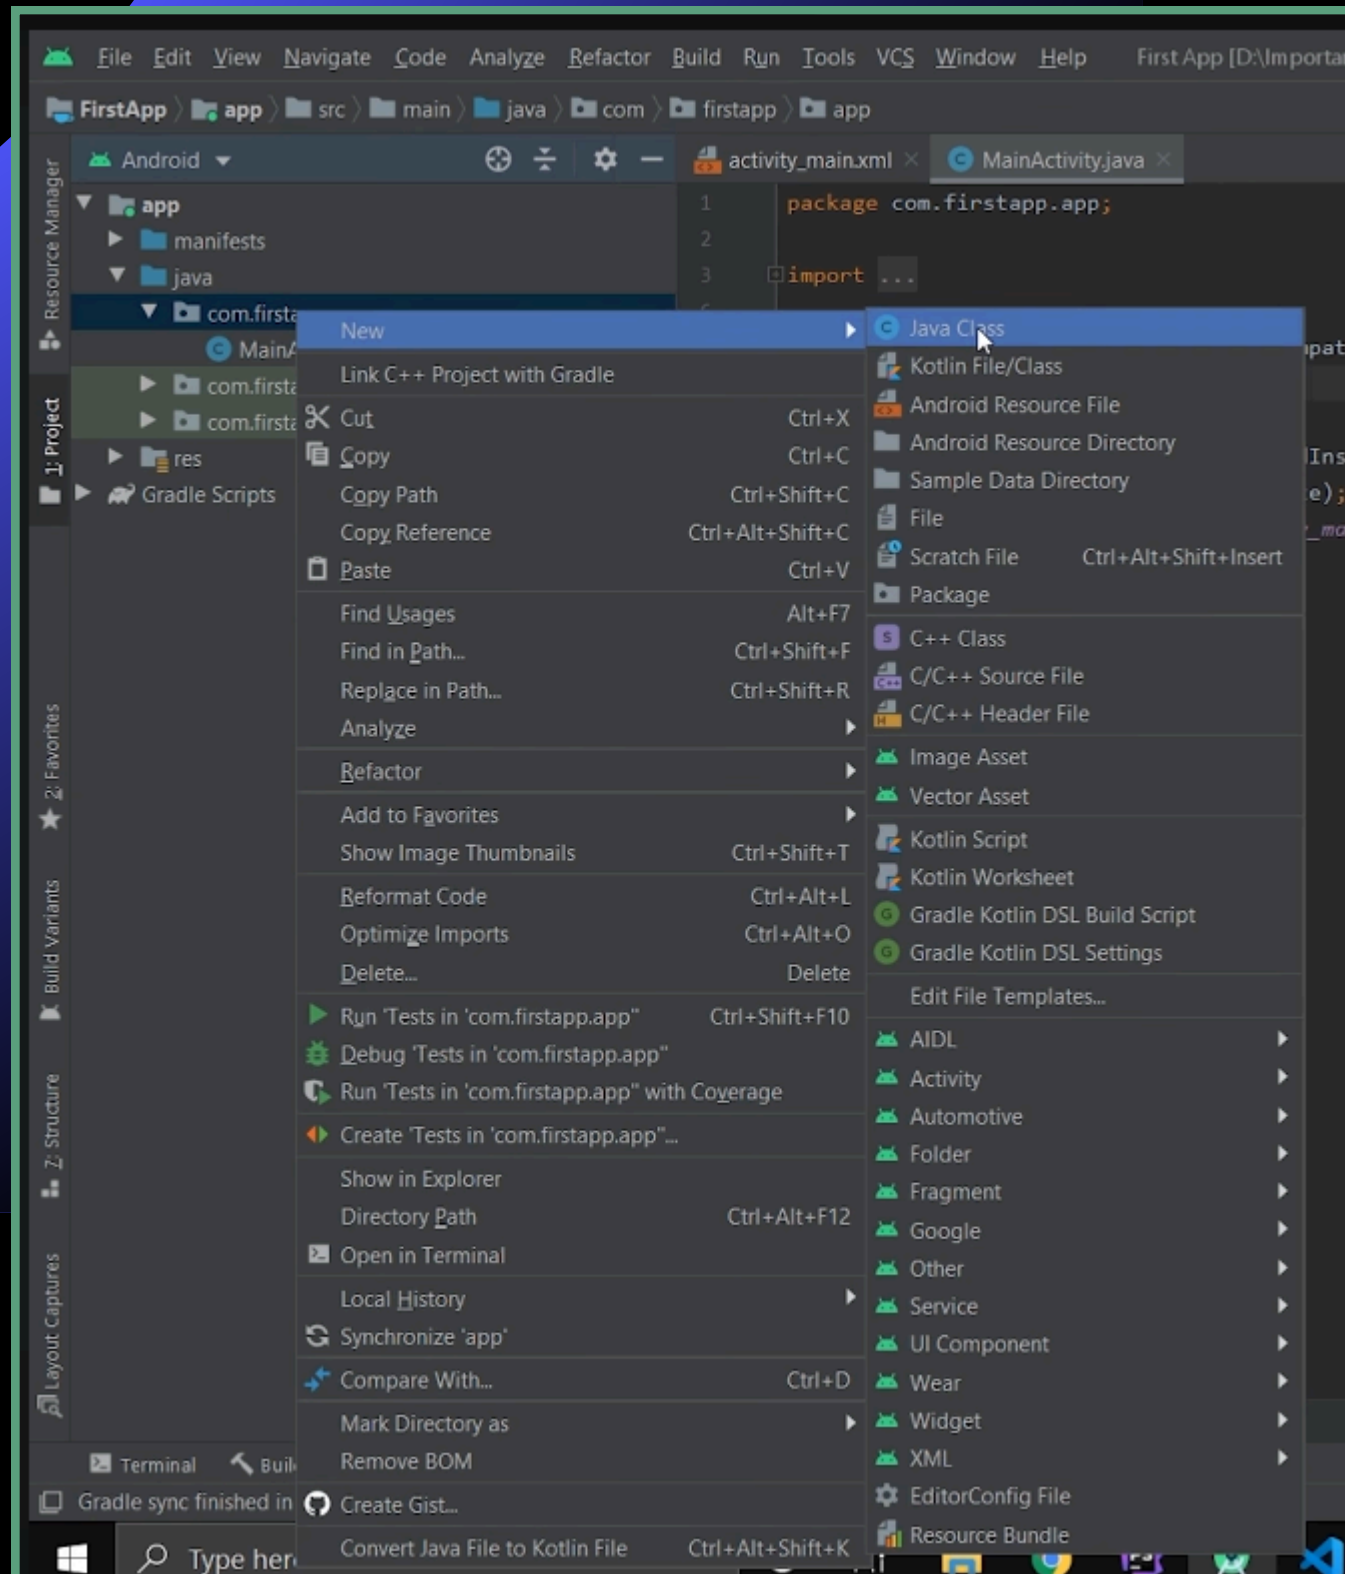

Main Interface

- Before this folders and interface show up, just wait until the project is completely built
- The folder with the package name you set earlier is where you will work on.

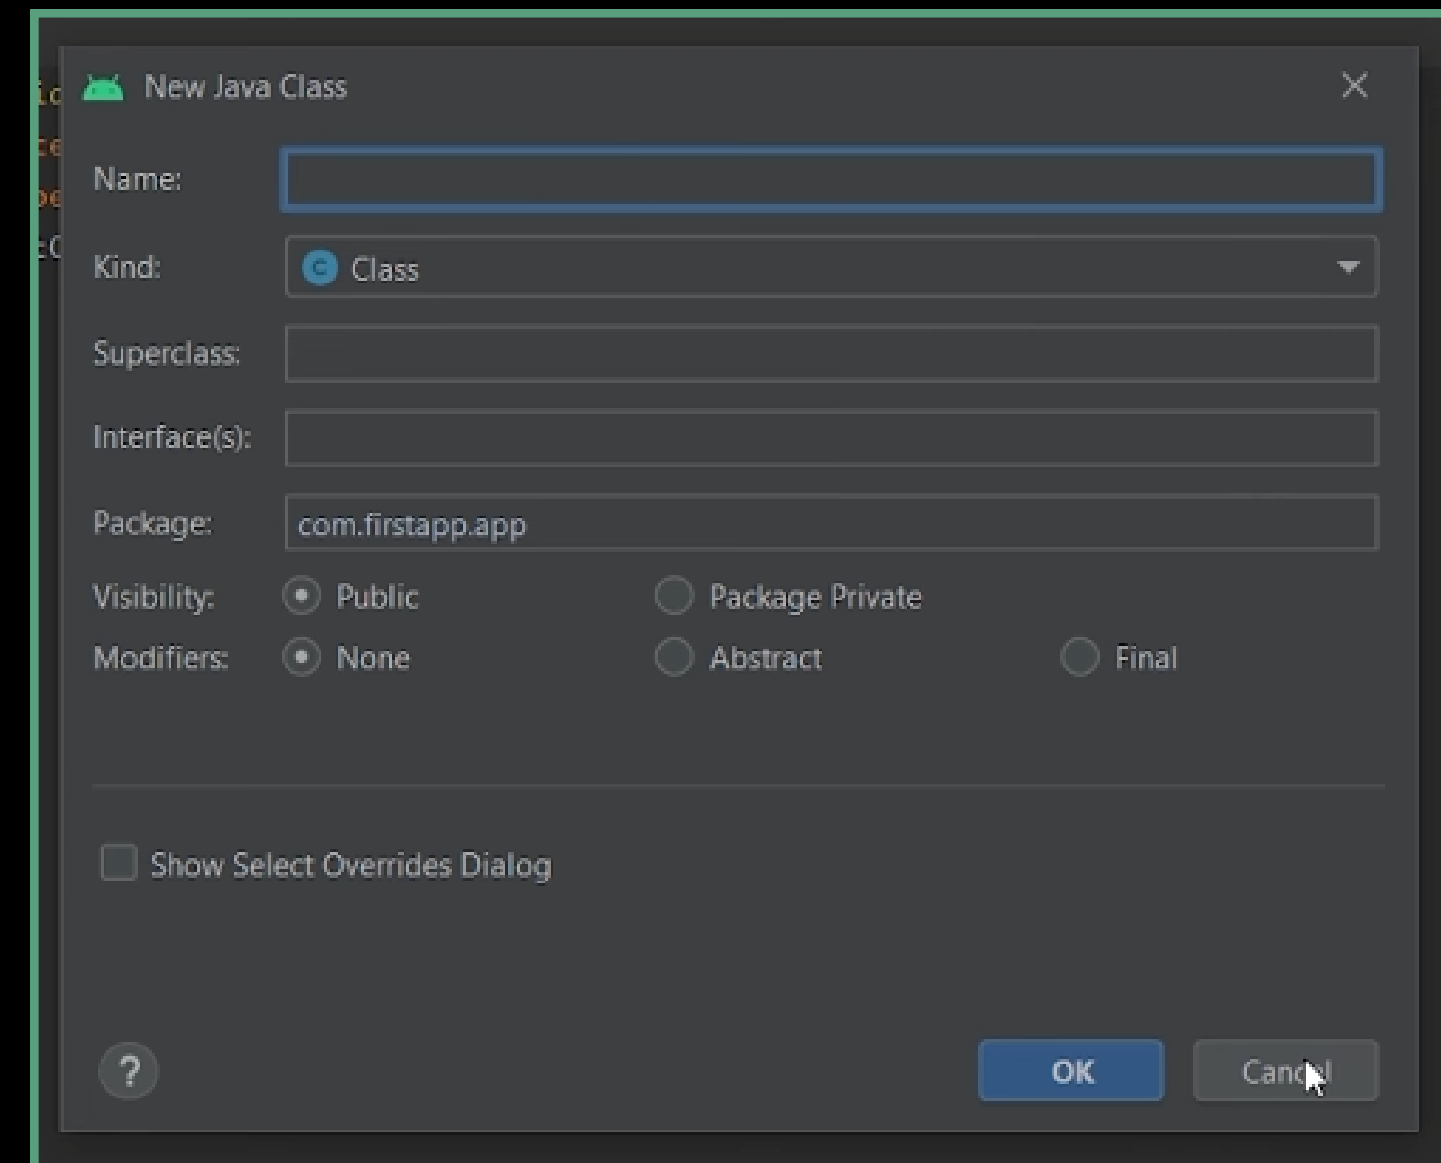

Create New Java File

- To create a new Java file,
Right click your folder > New > Java Class

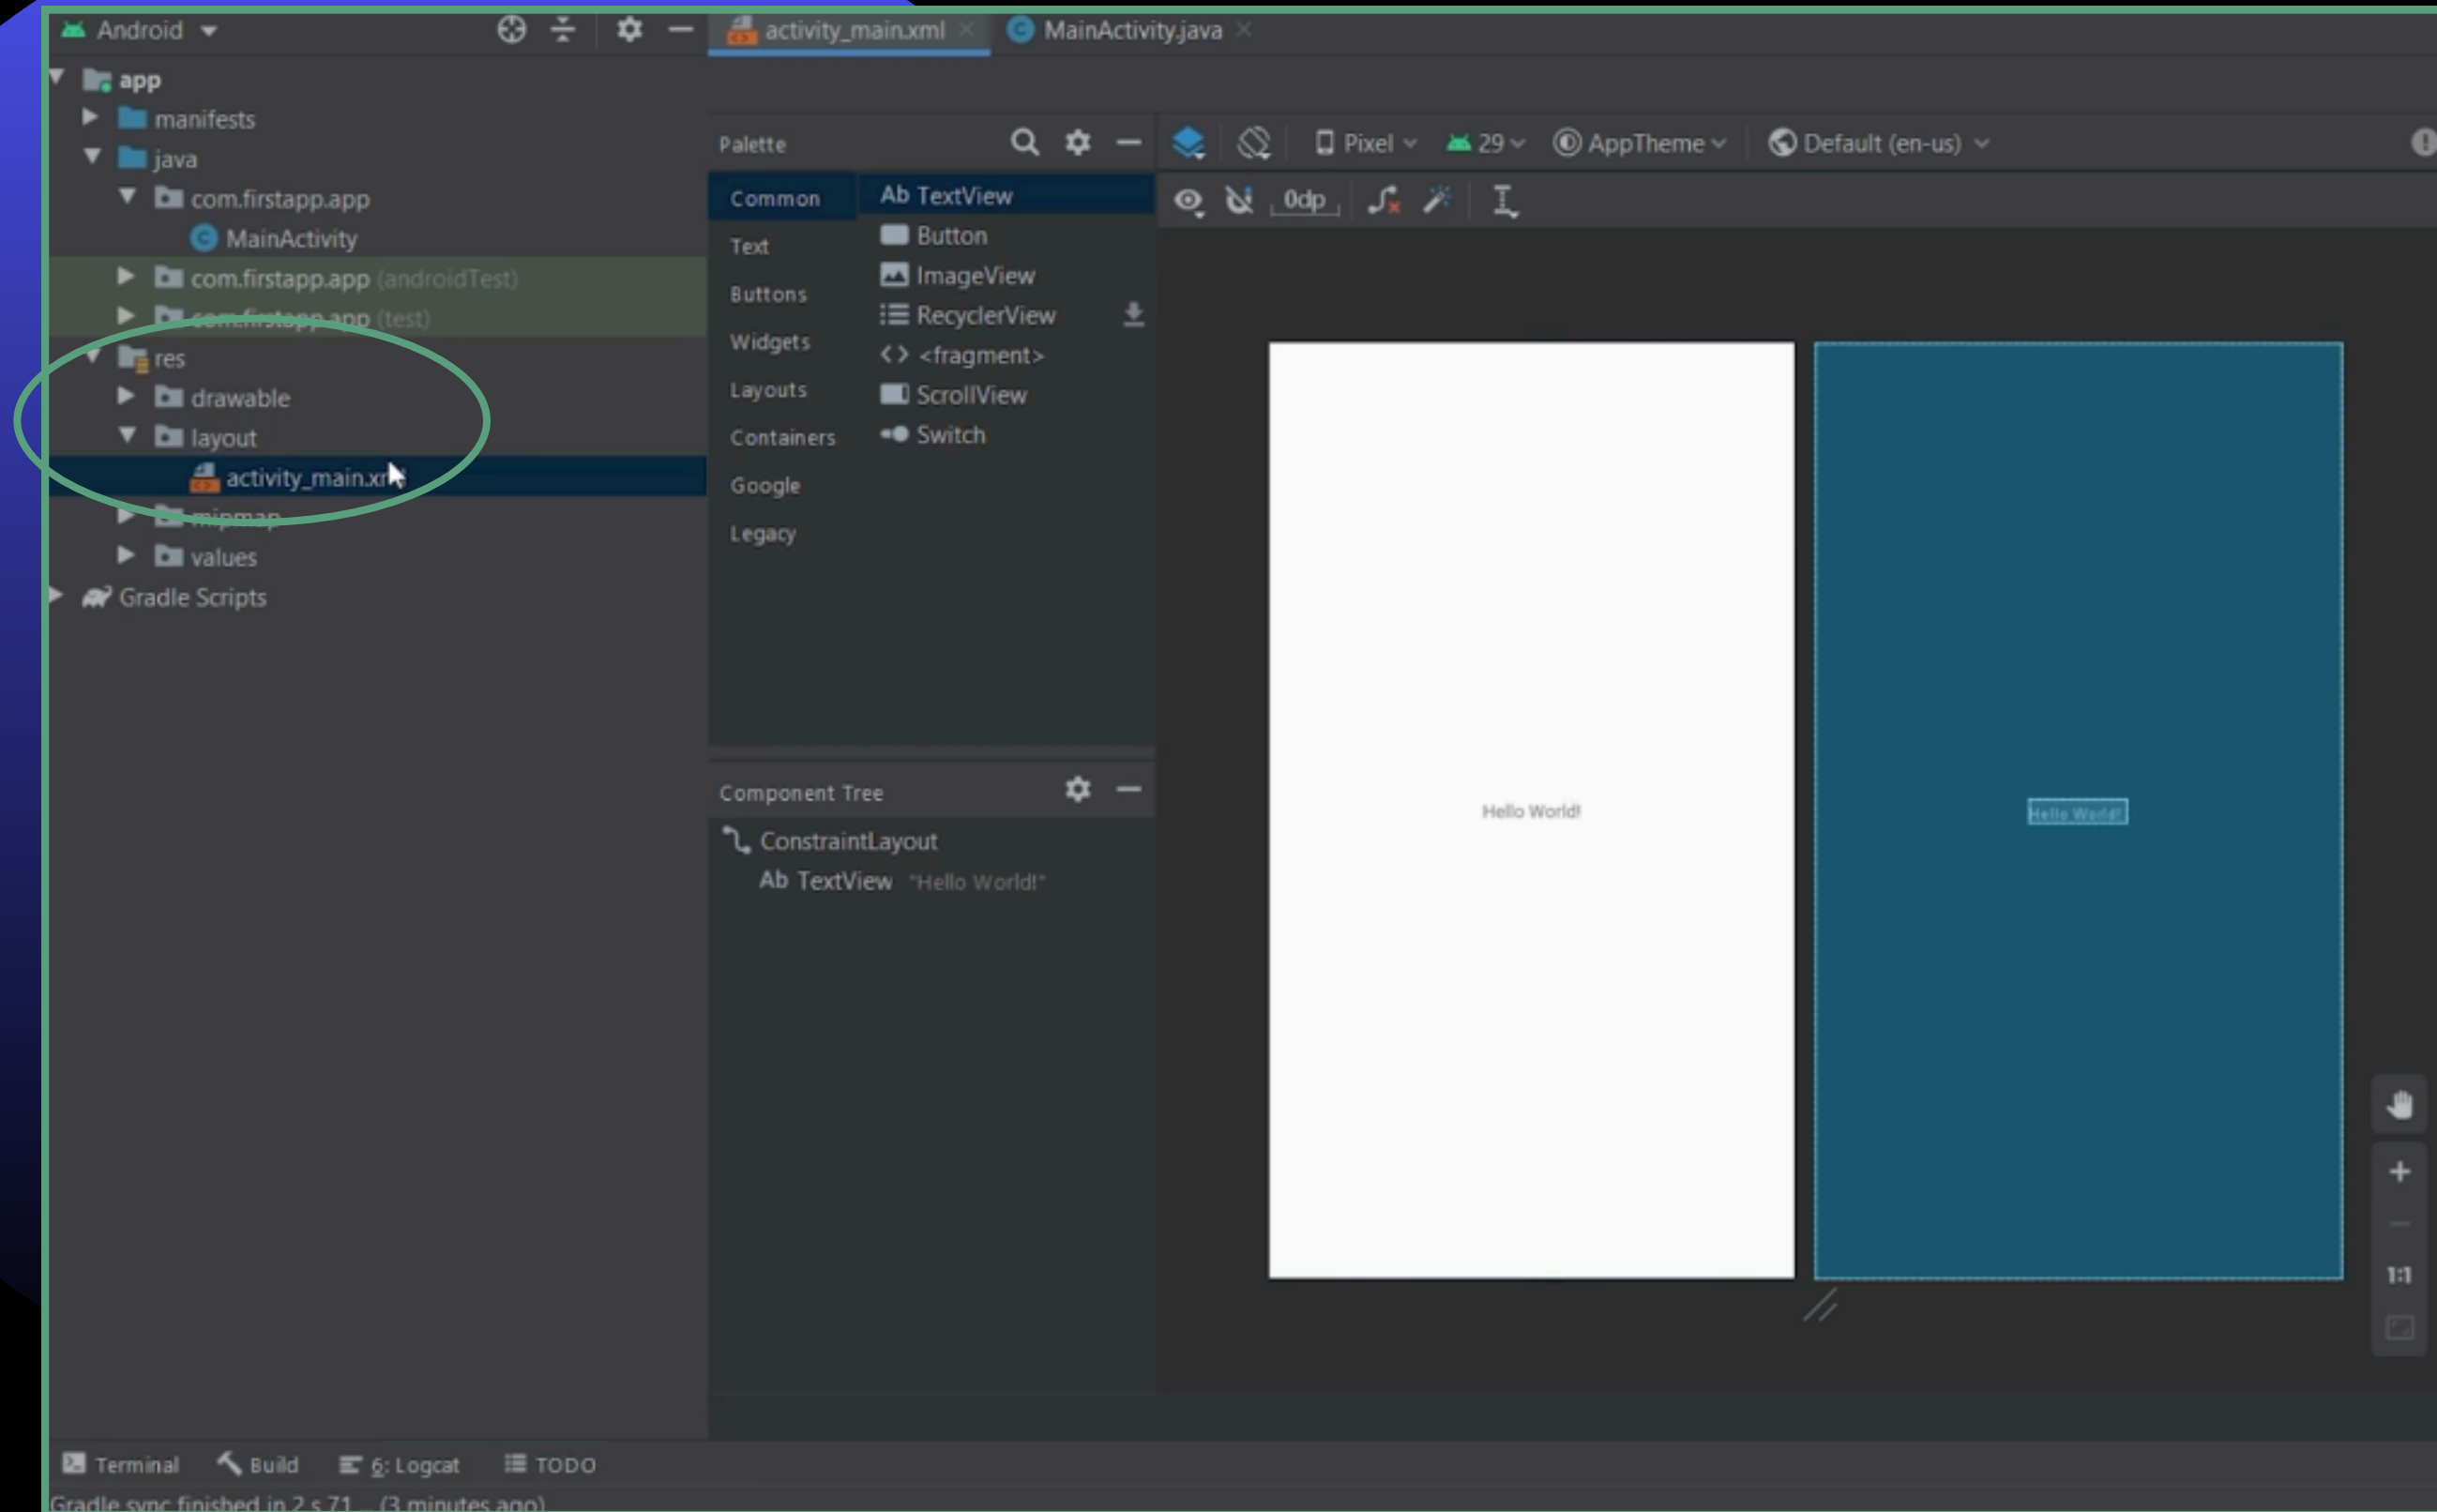

- Name your Java file

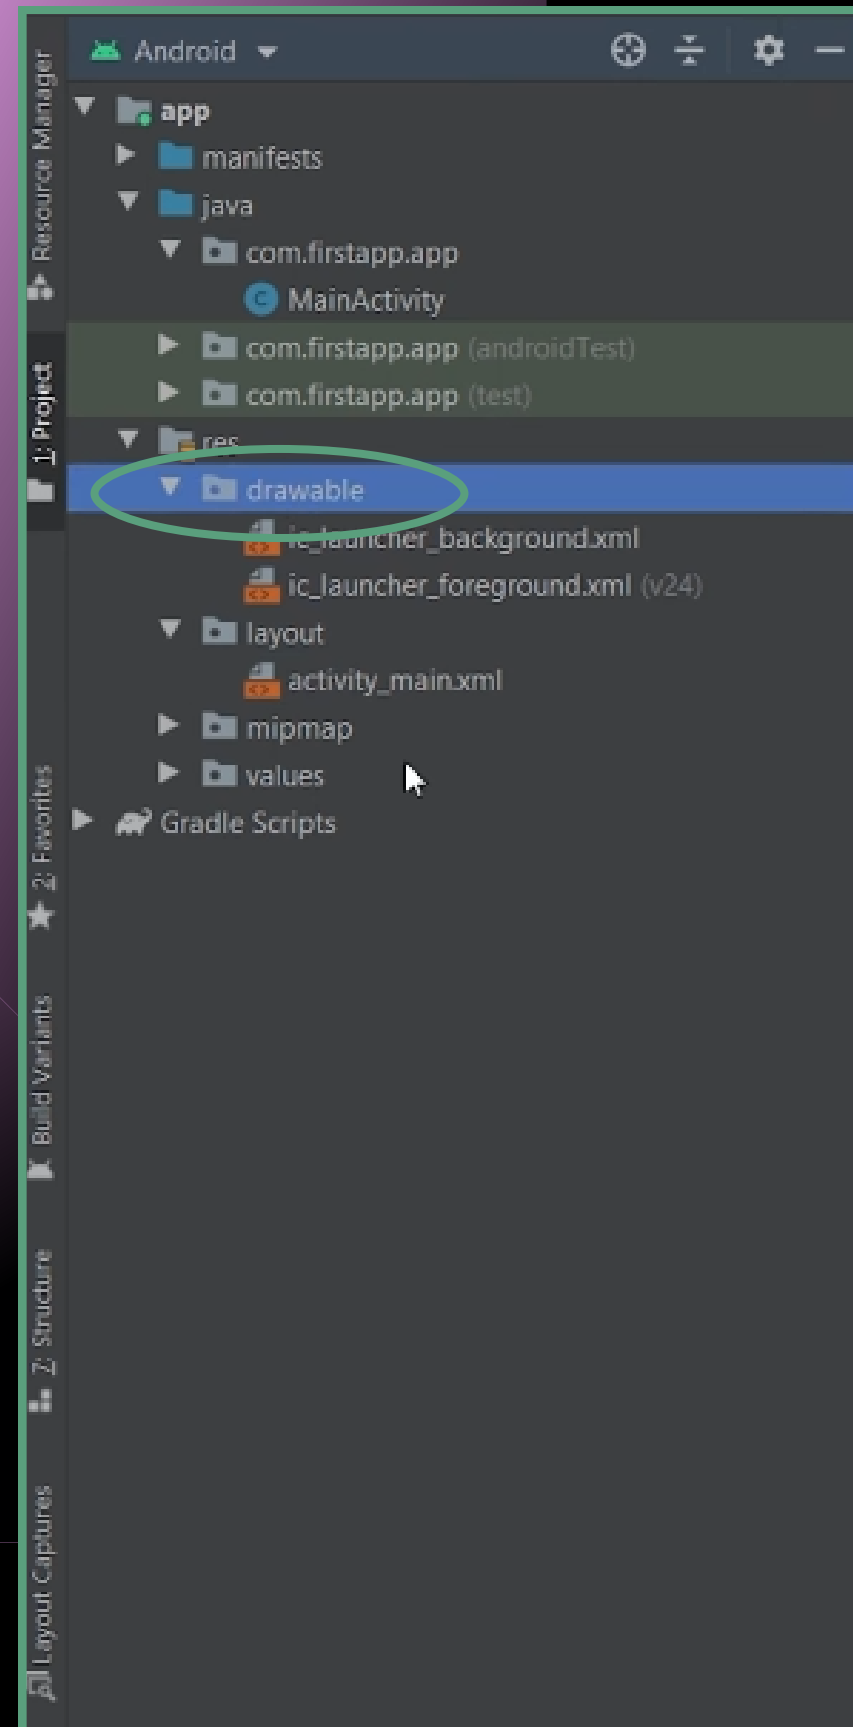

Designing Layout

- Under the folders: res > layout is where you will edit for designing the layout

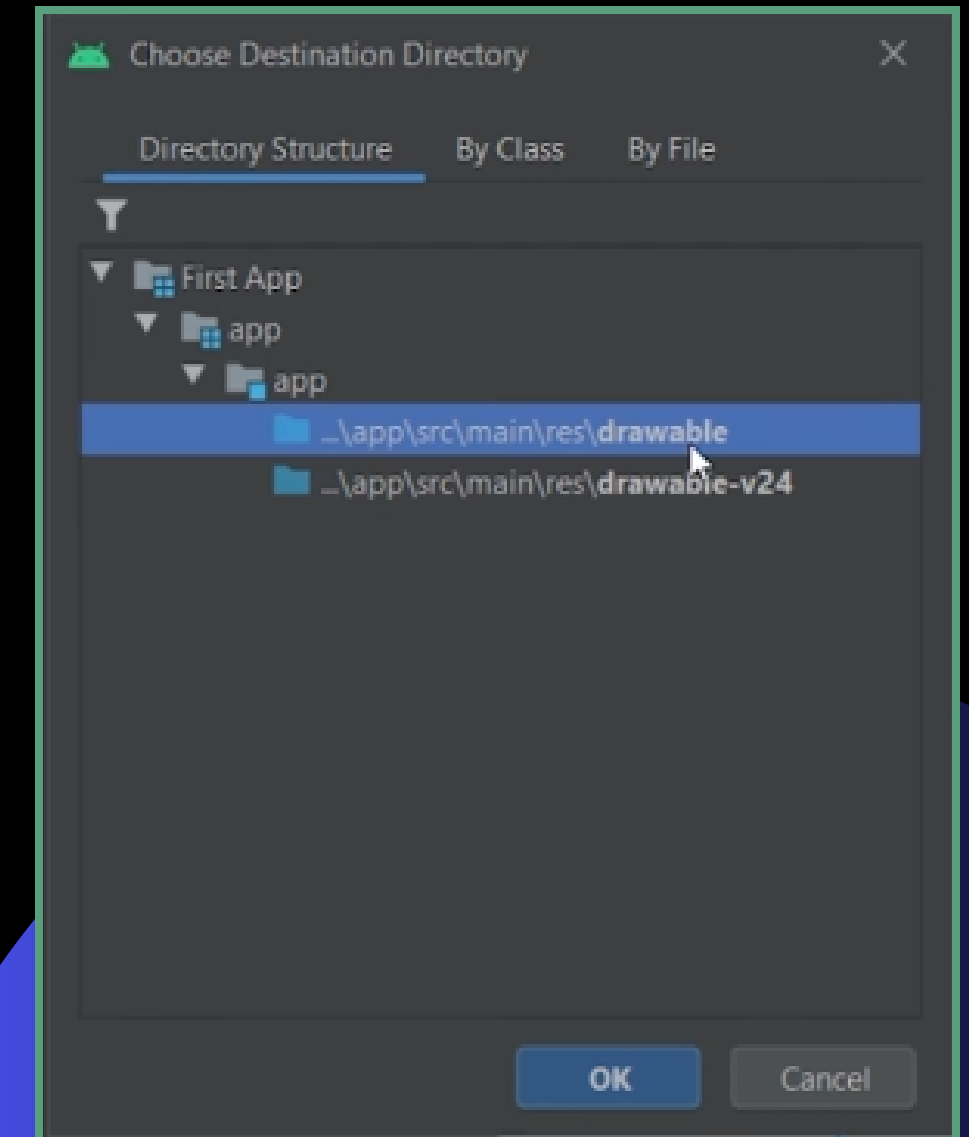

Adding Images

- Keep all the images here that you wanted to add in your design

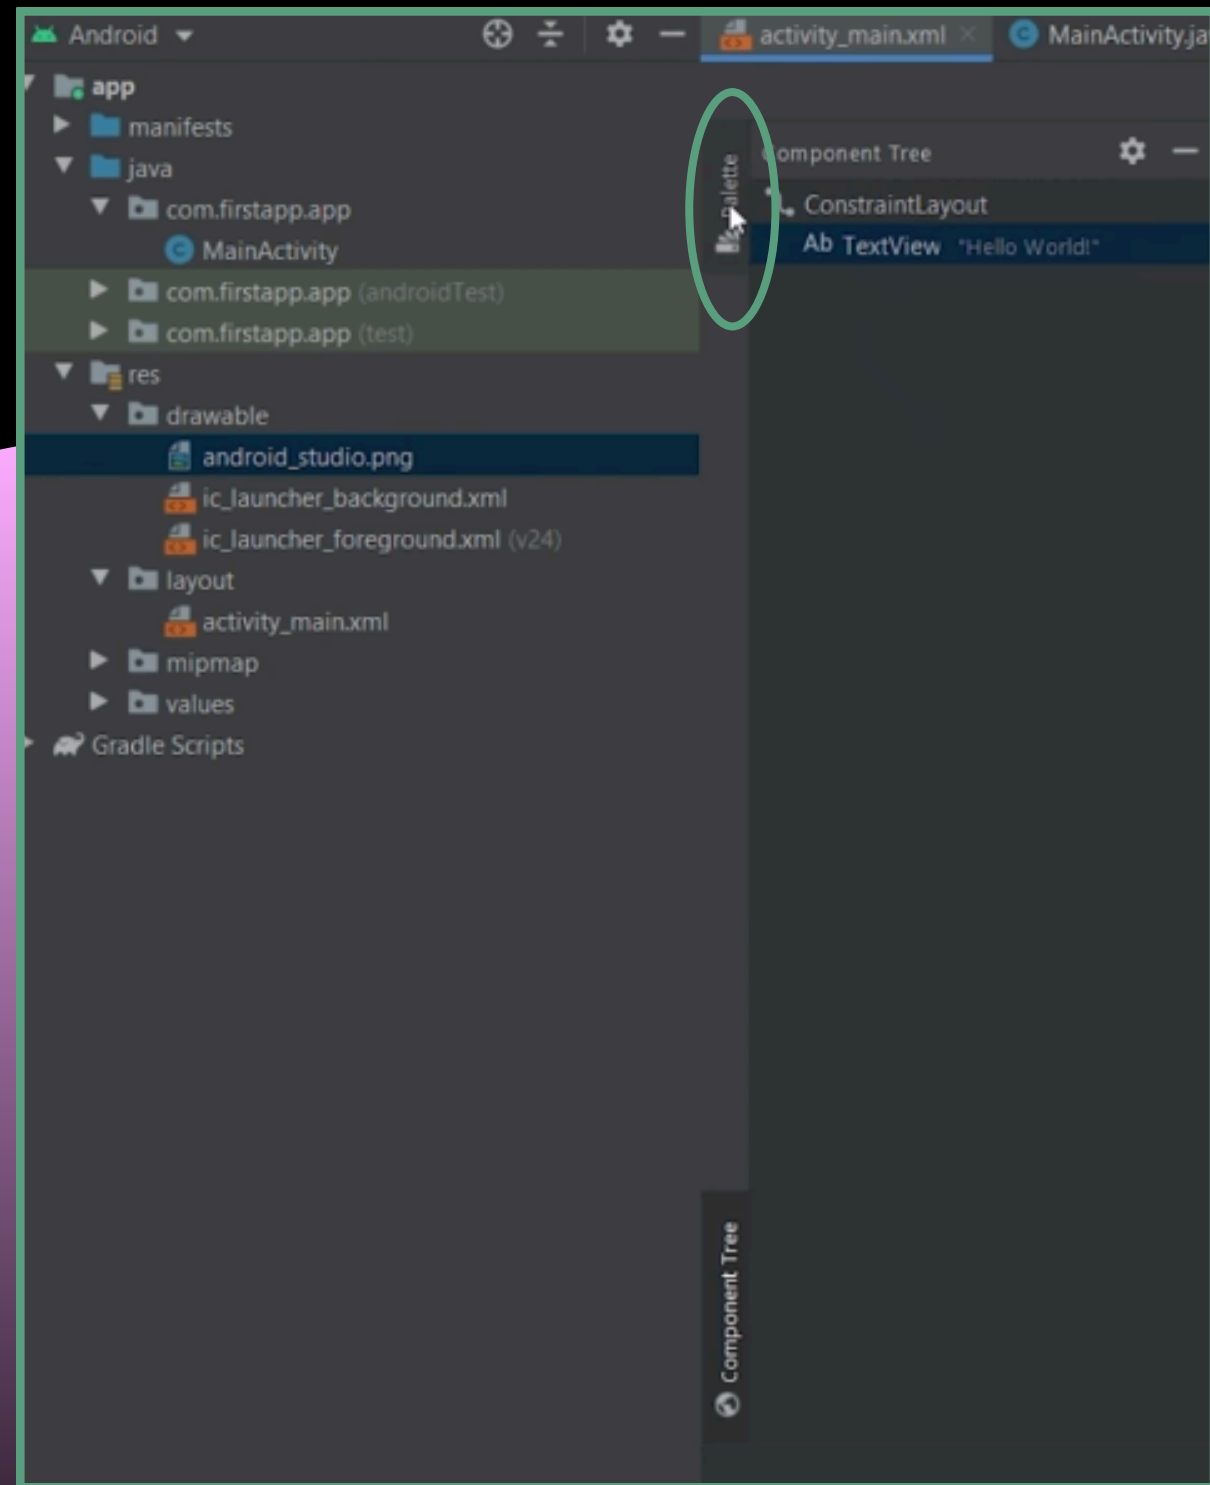

- To add an image, right click and copy it first from your PC's folder
- Then right click on the drawable folder, and select ONLY this folder
- Make sure the image name contains ONLY small letters

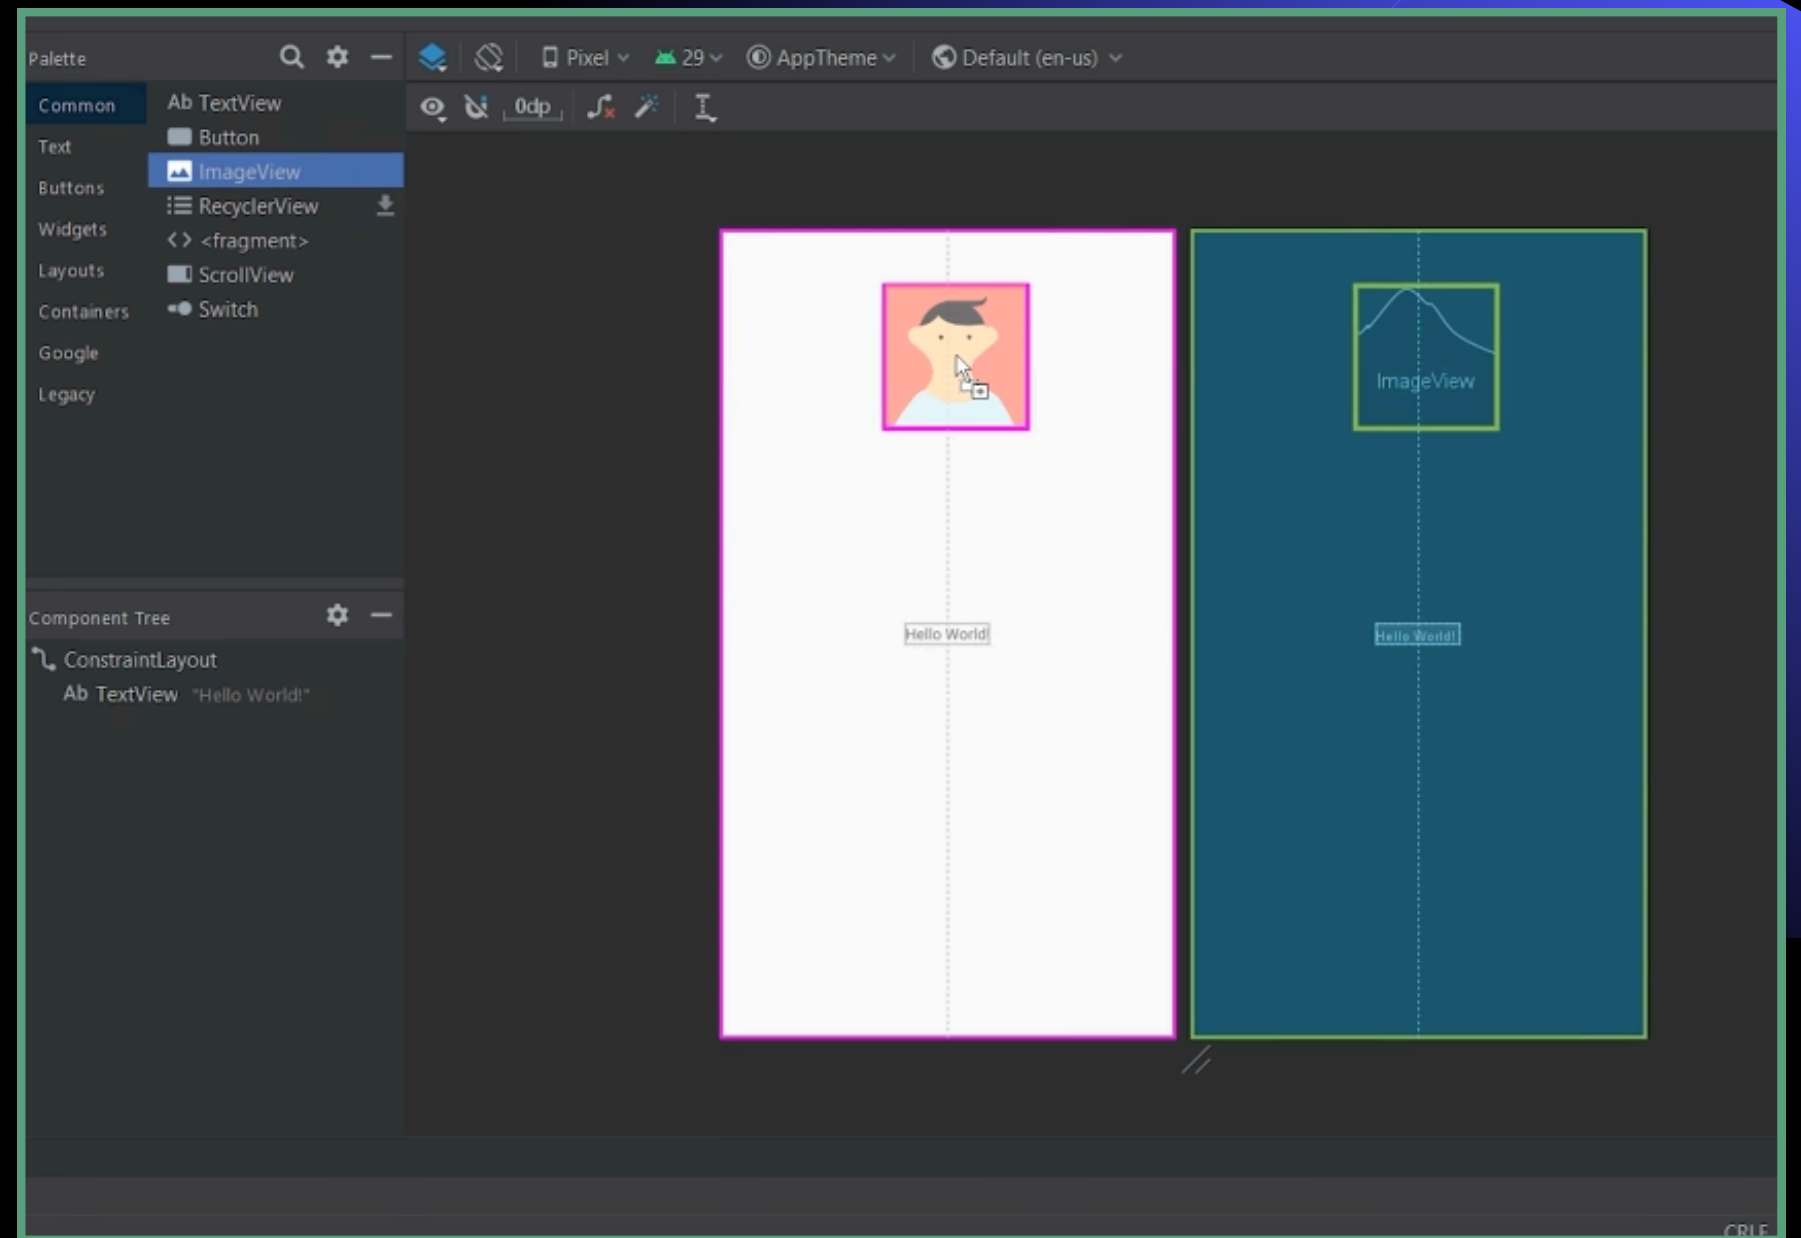

Apply Image

- After the image is added in the drawable folder, go to Palette

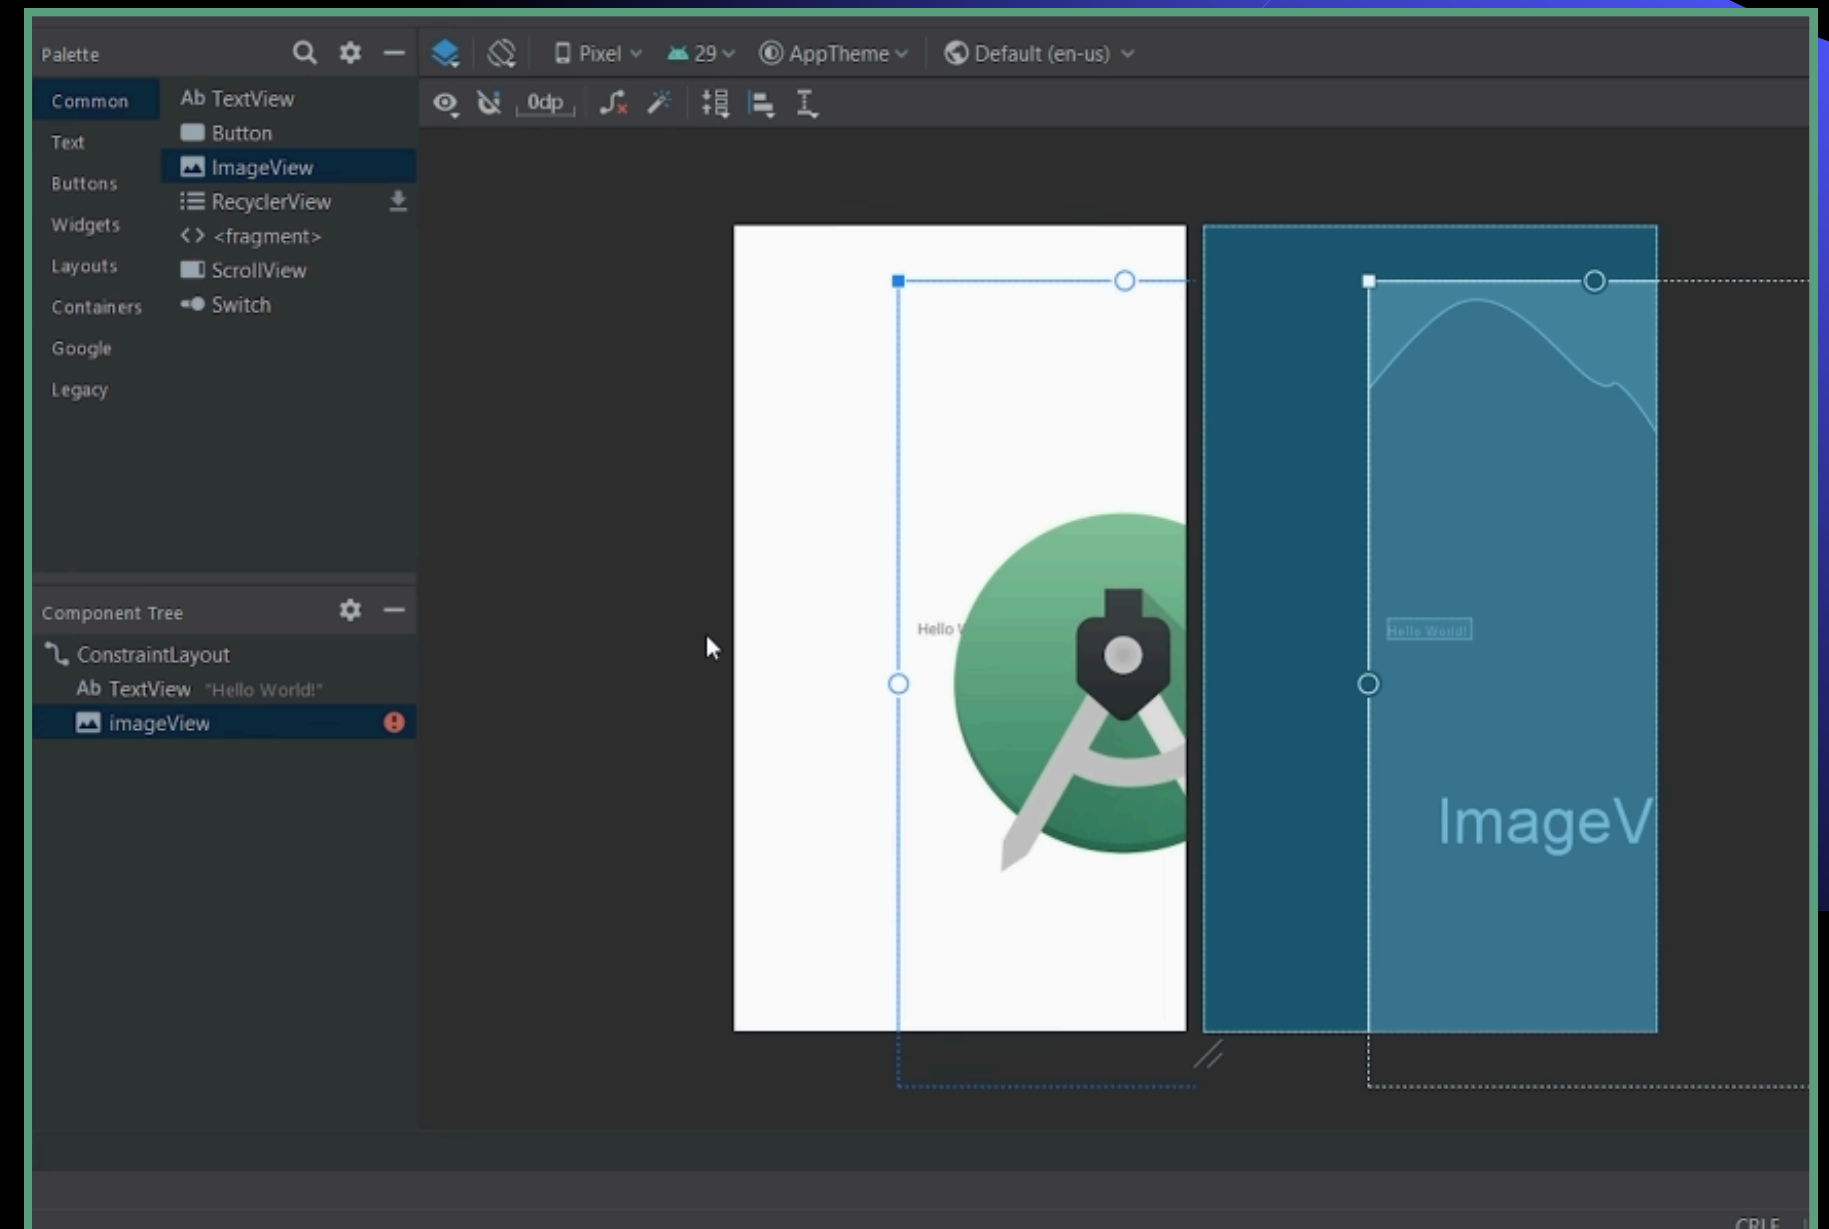

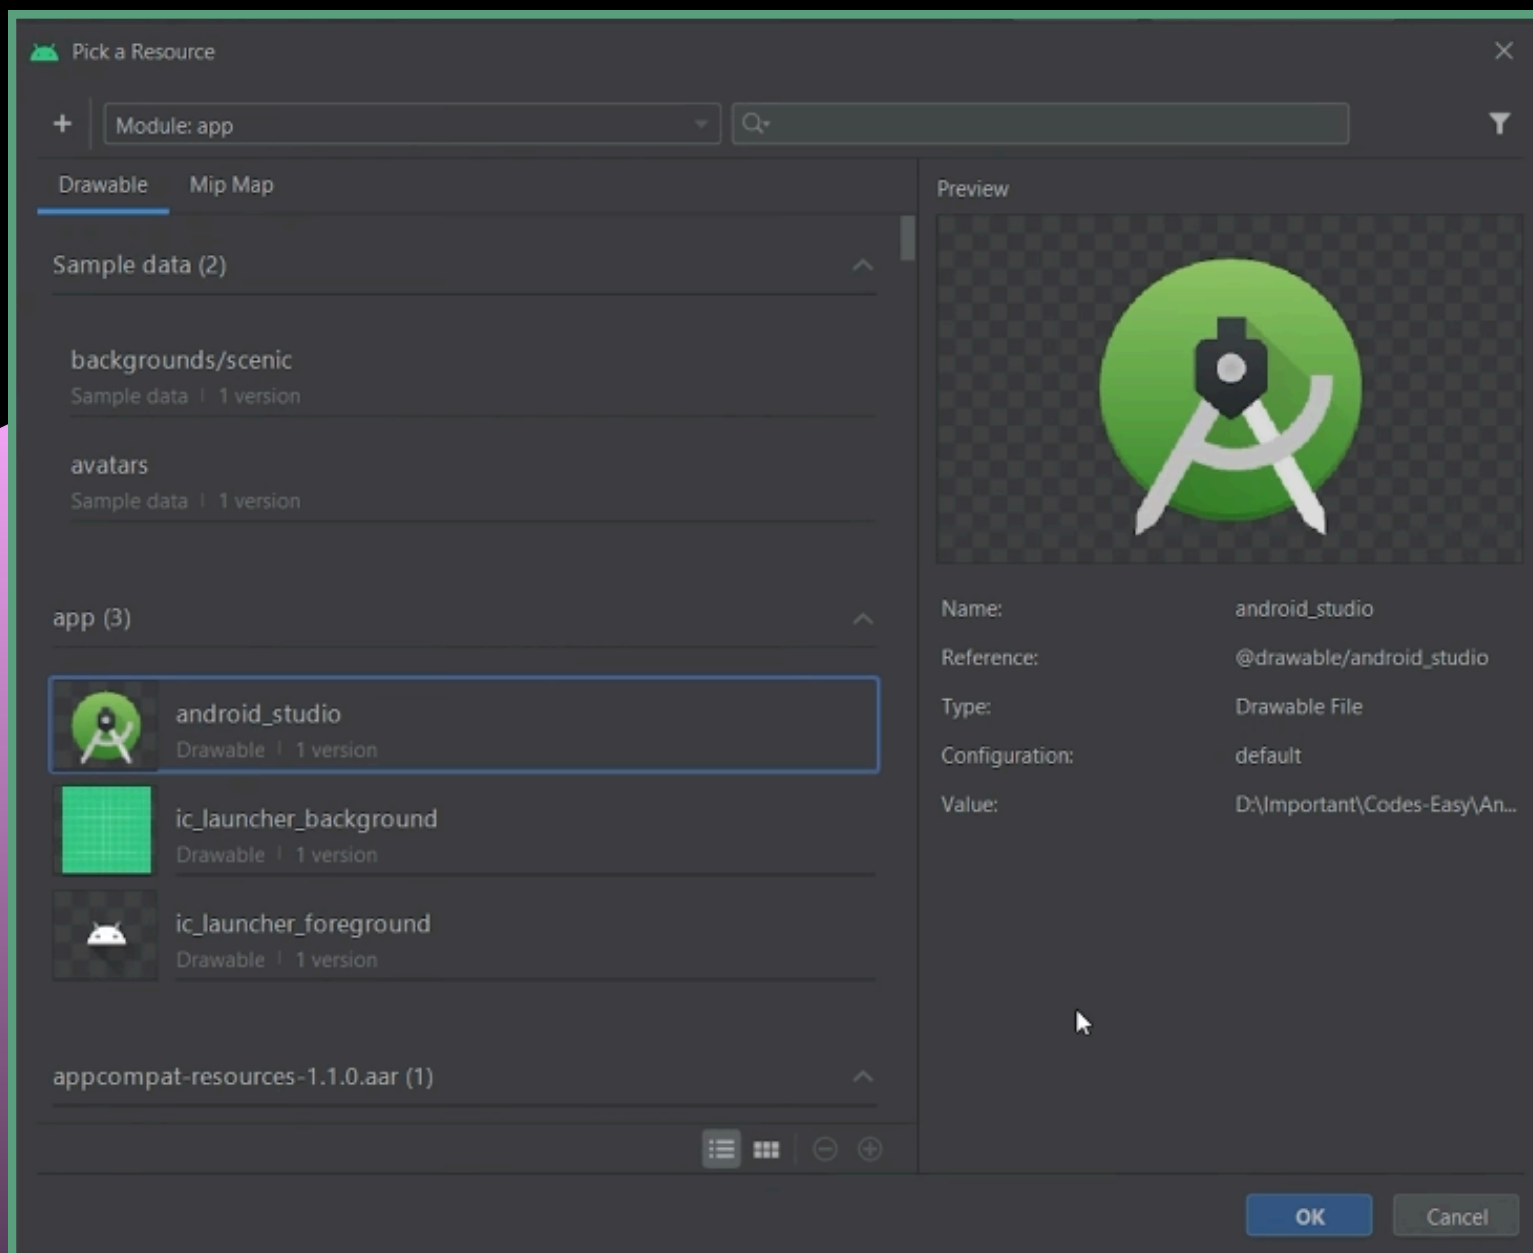

- Drag the image view to the interface

Apply Image

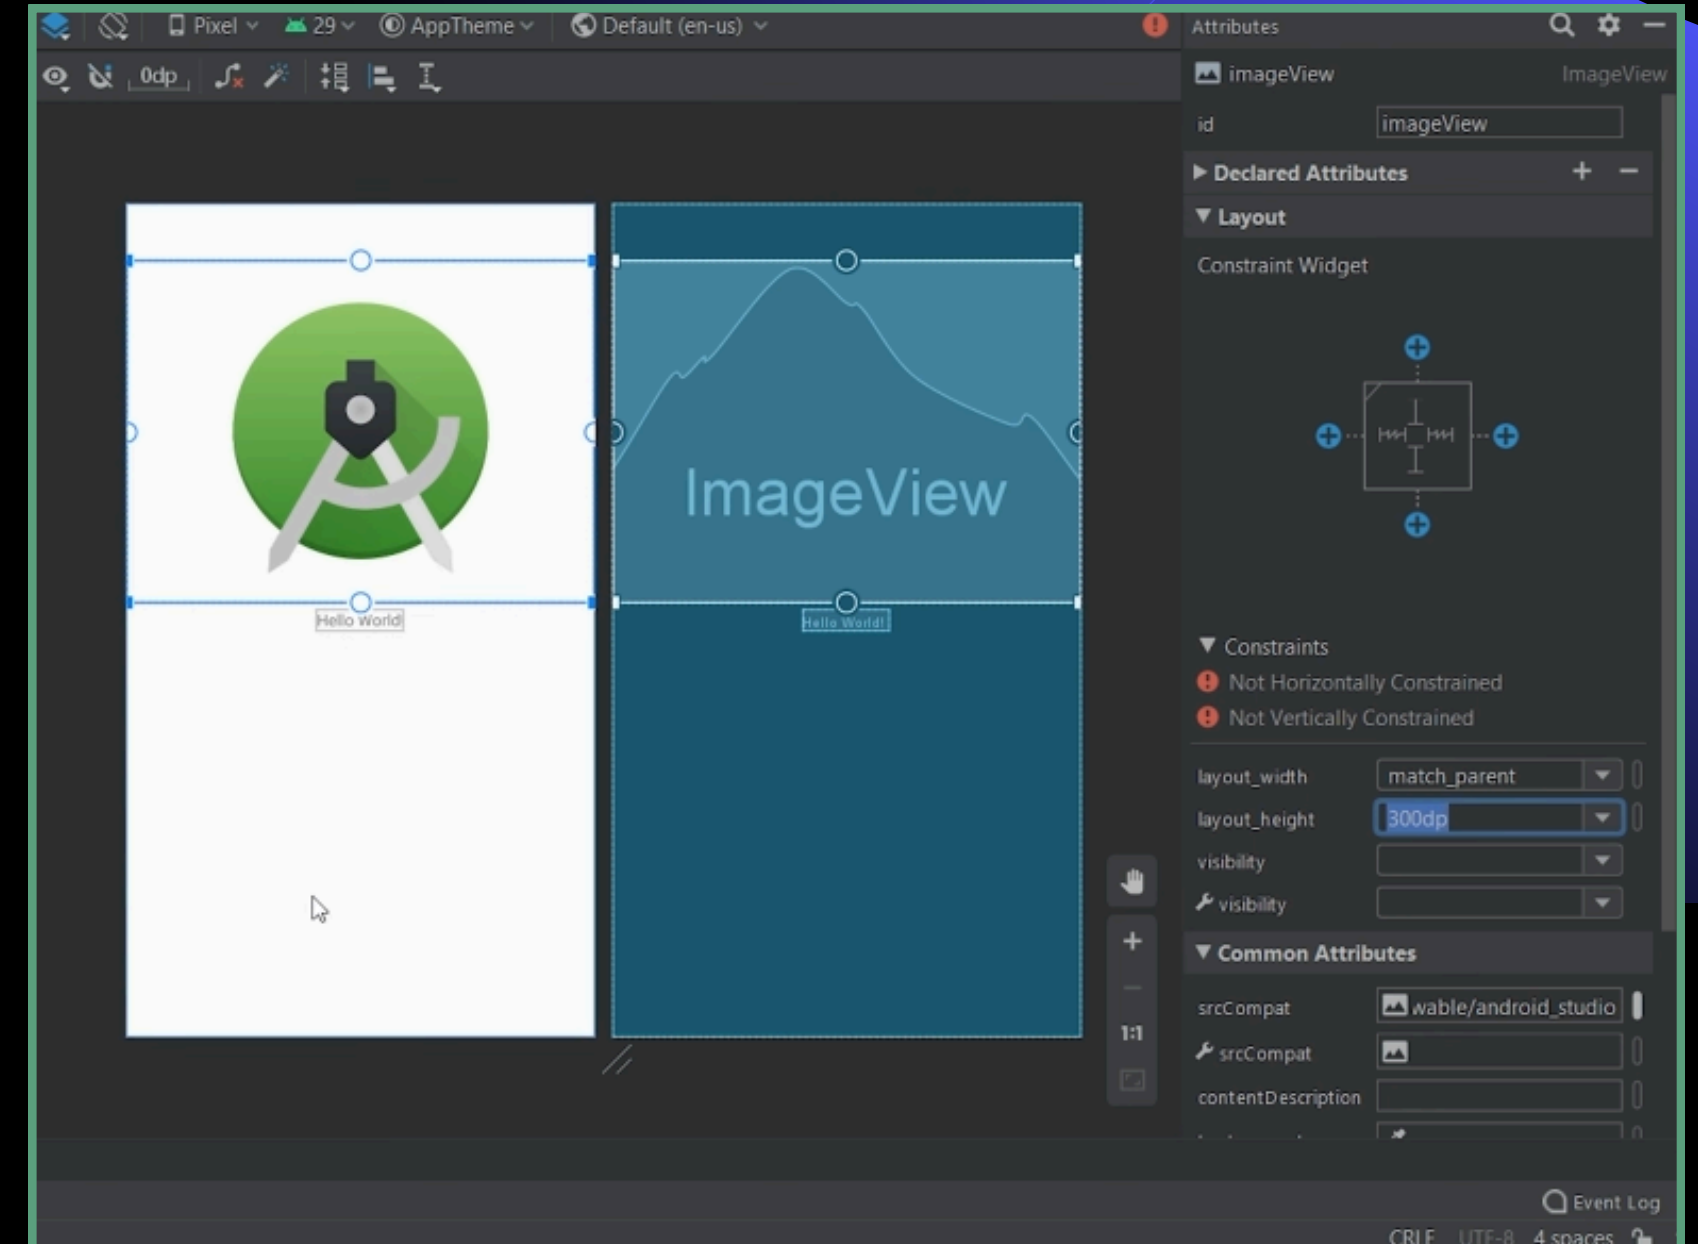

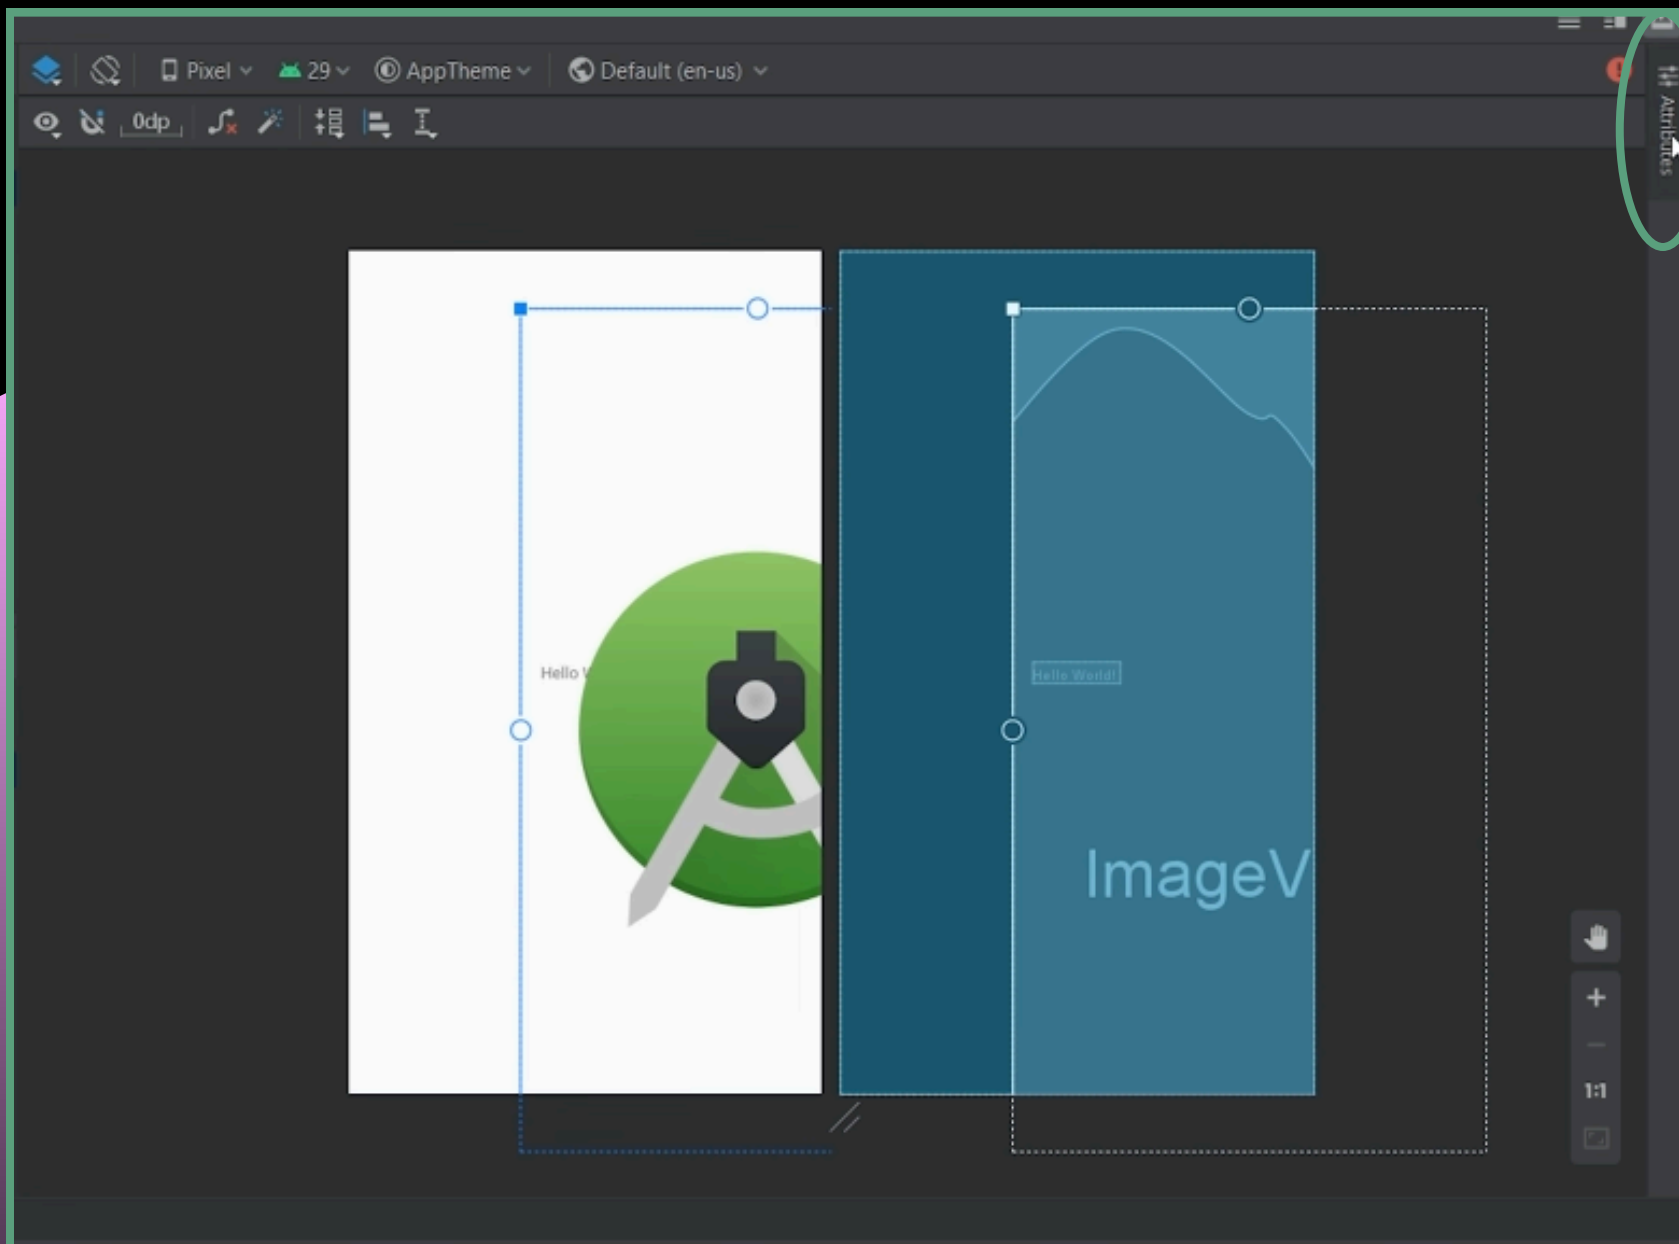

- This window will pop out and select the image that you want to apply

Scale the Image

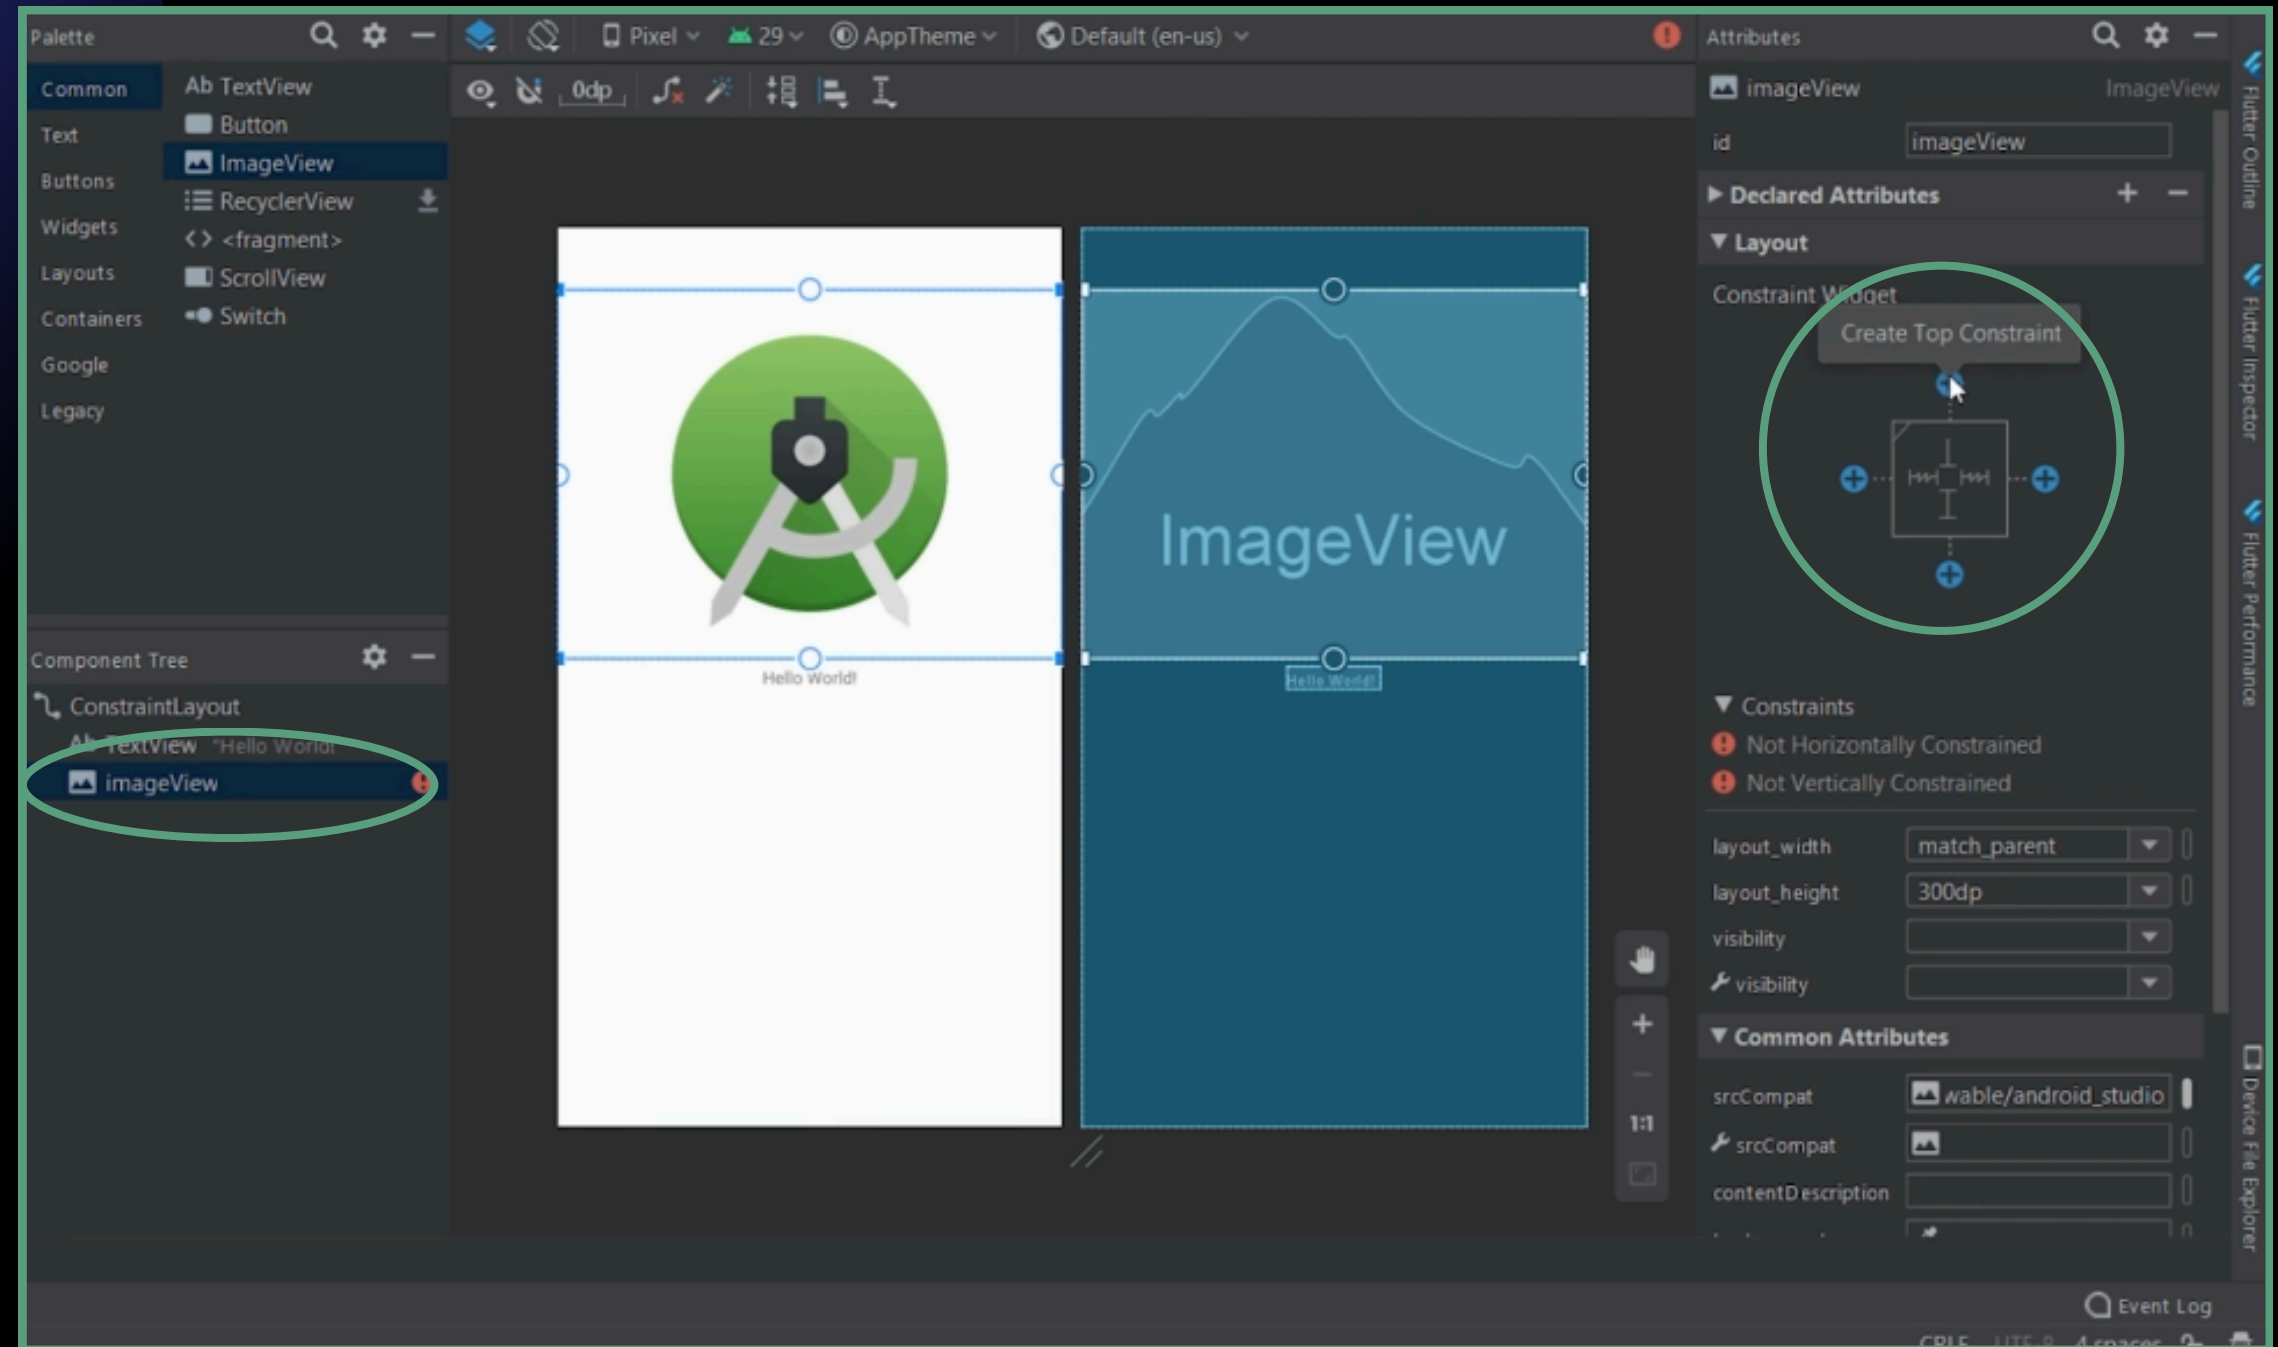

- Click Attributes

- Then change layout width to match_parent and layout height to 300dp

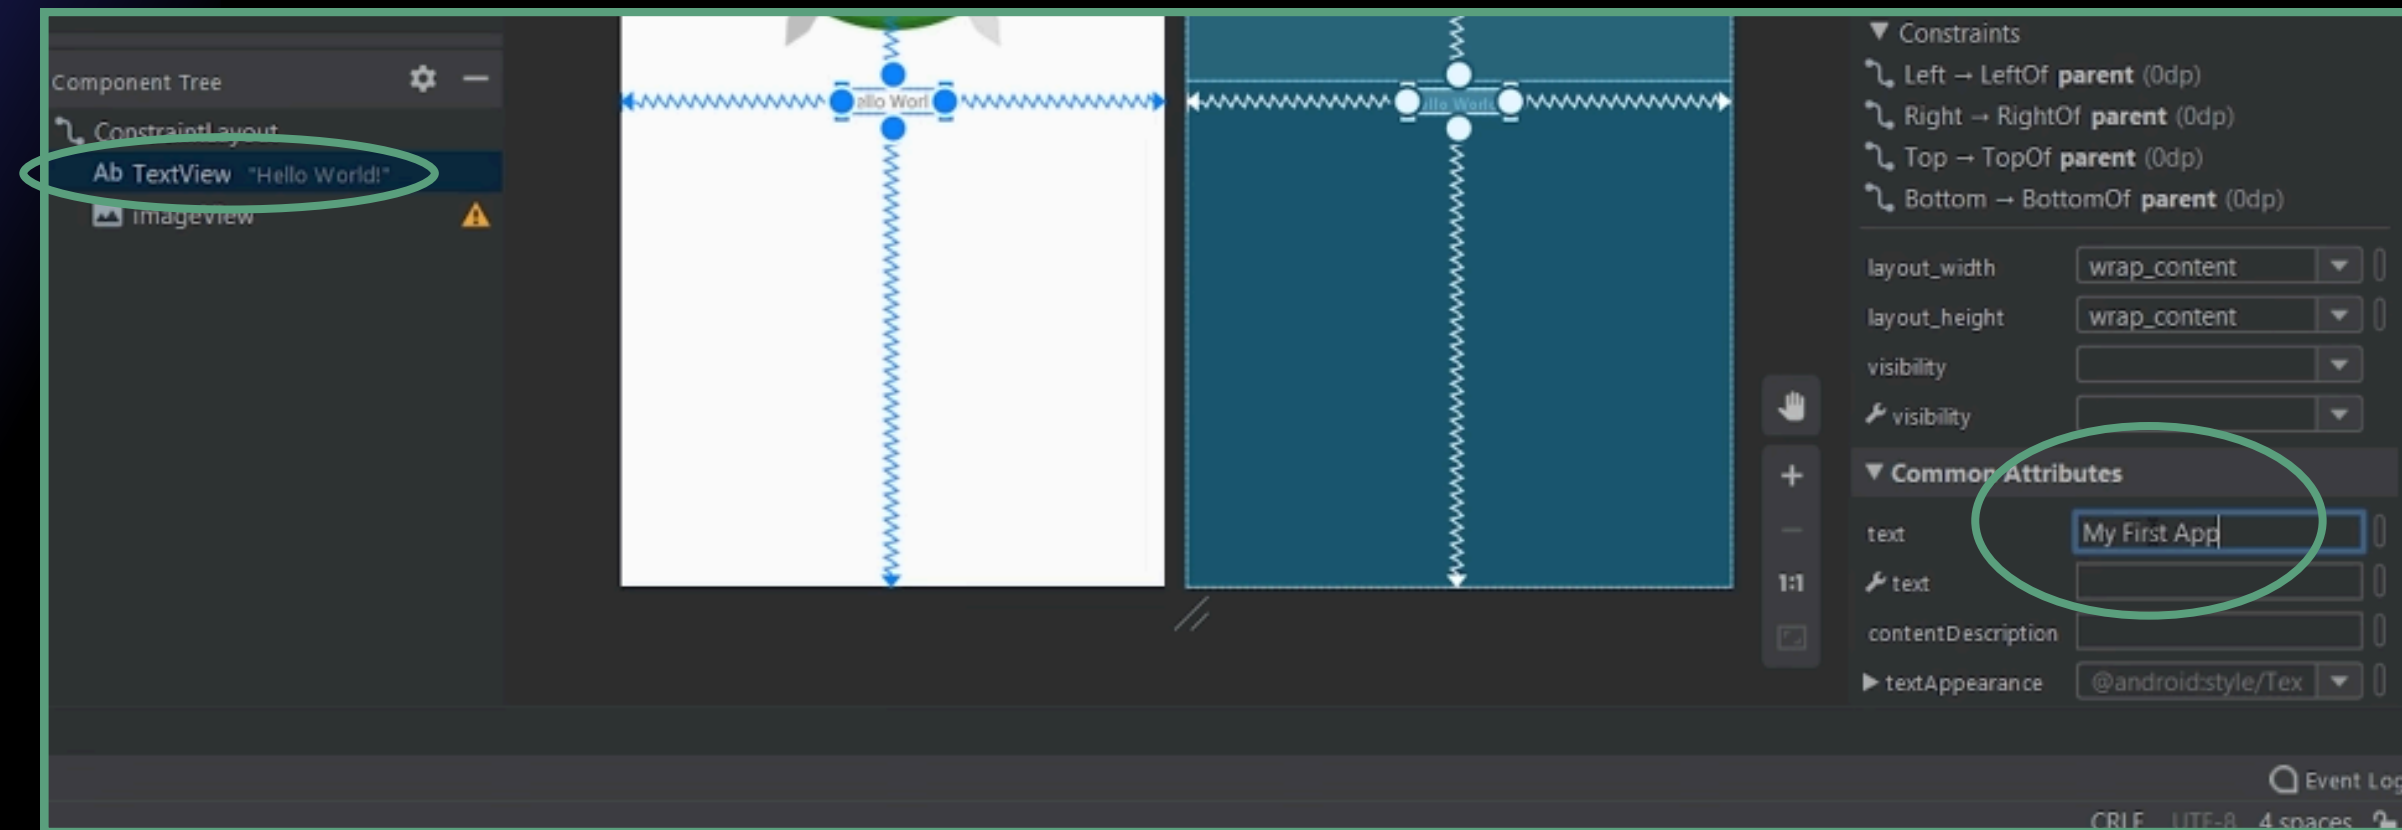

Set Constraints

- To add constraints, select the image and click the plus buttons EXCEPT the bottom one since there is a text below

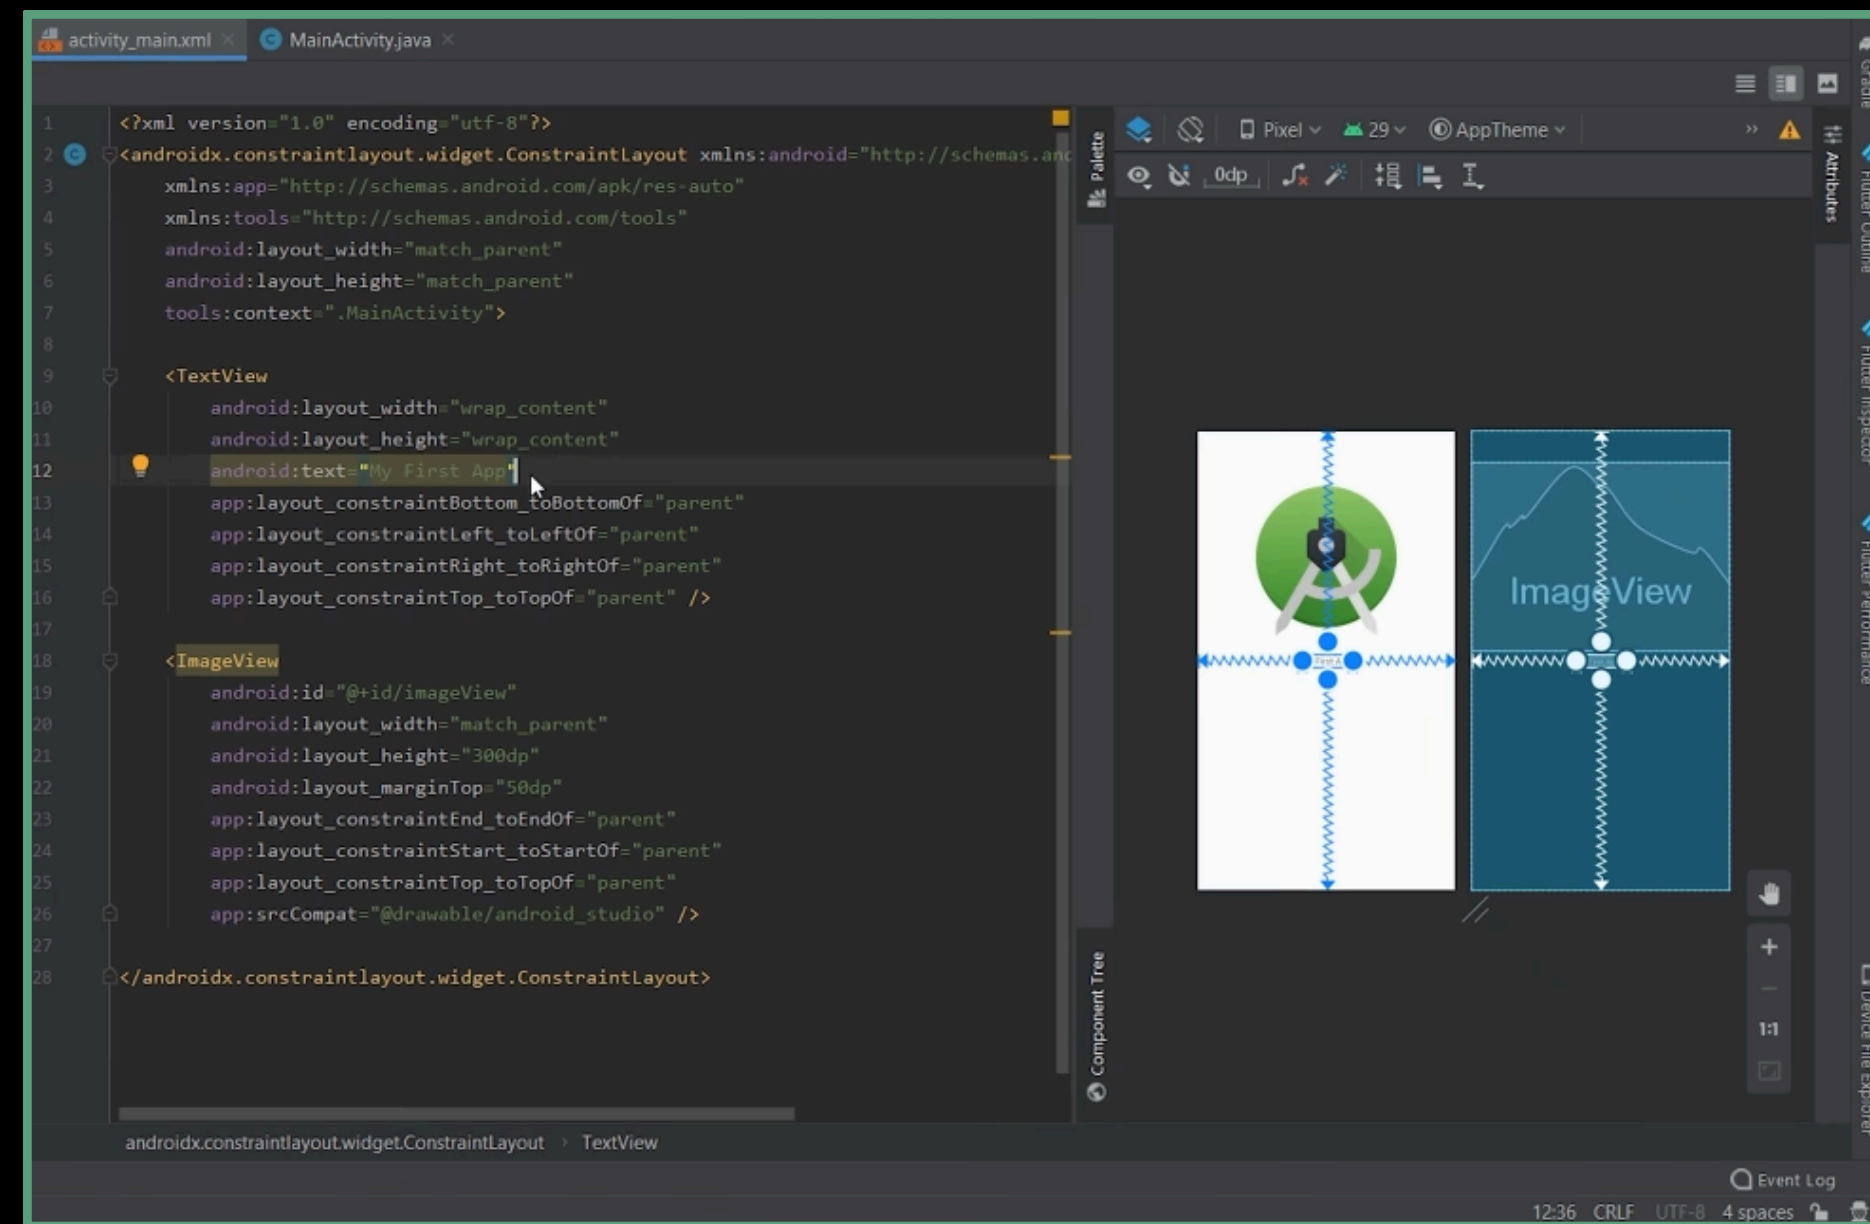

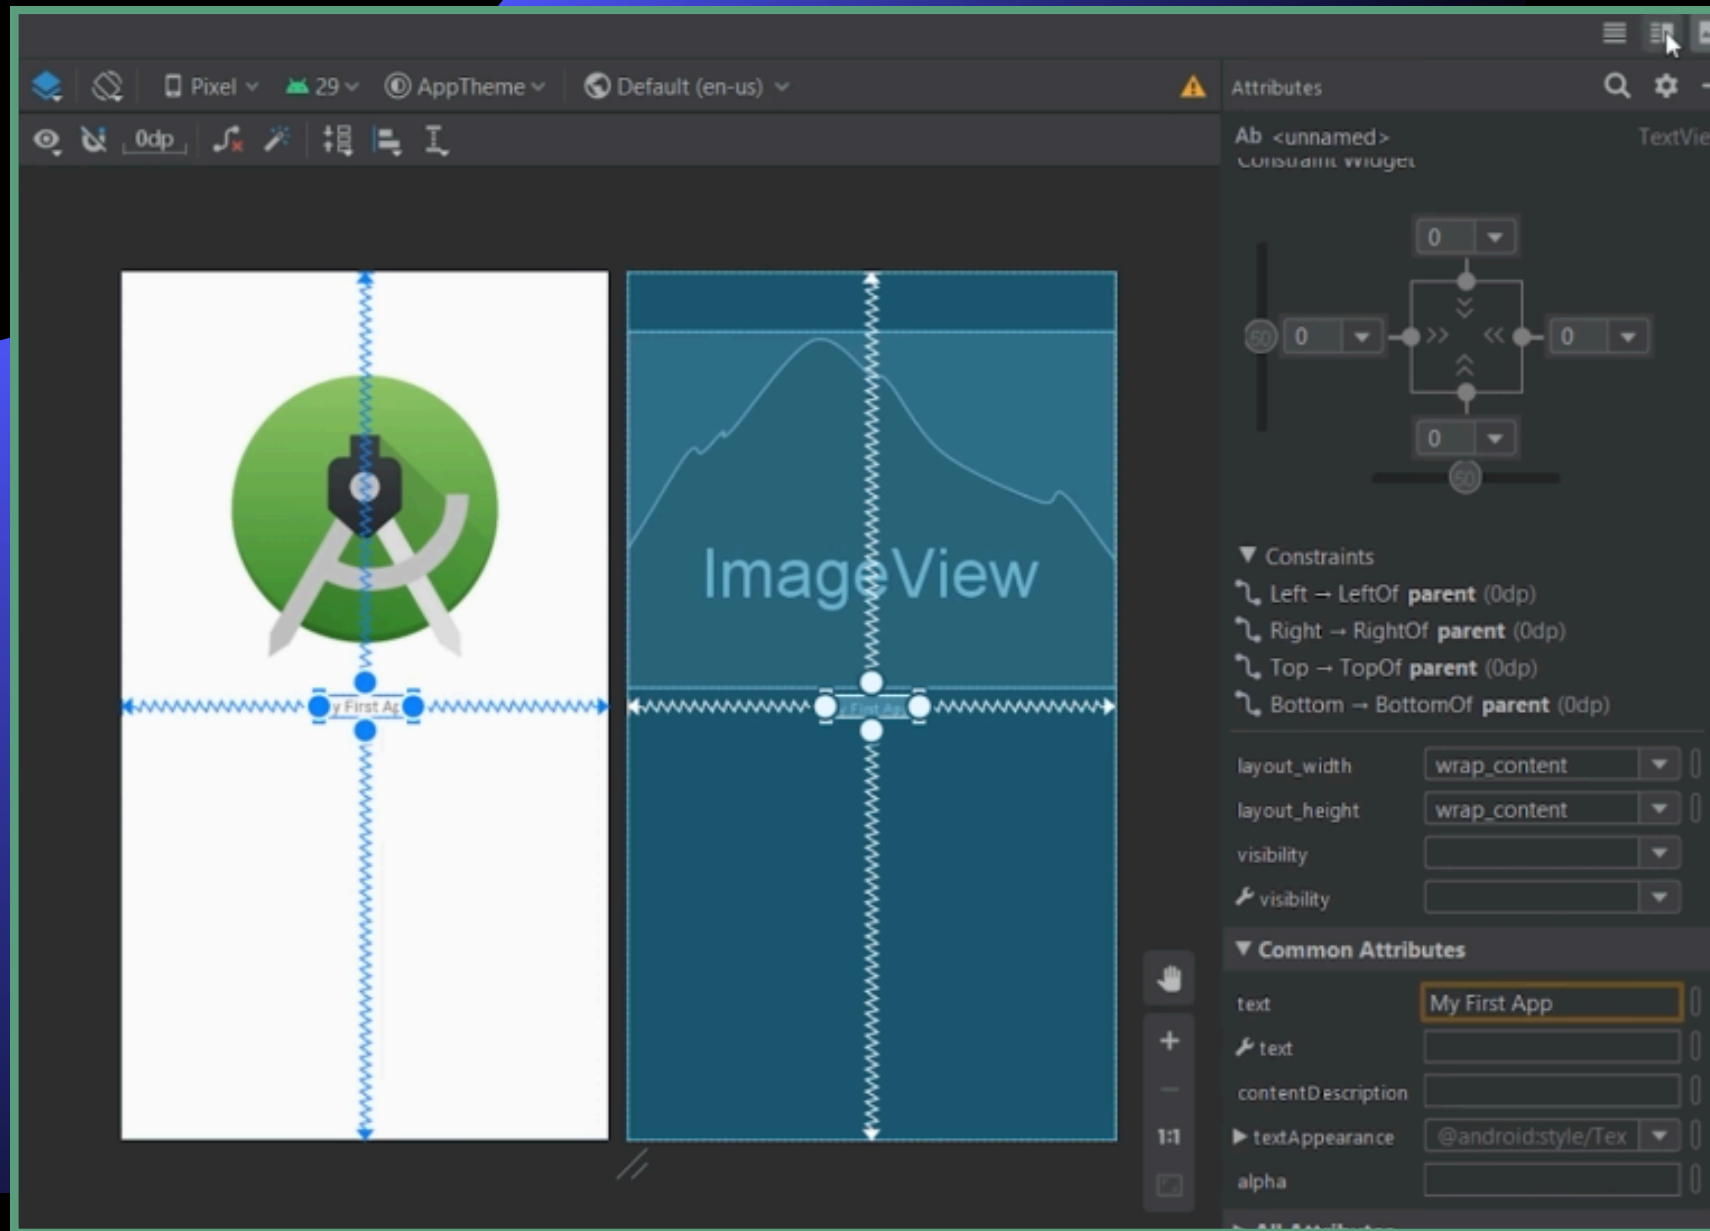

Edit Texts

- To modify the content of a text, just click the Text and then go to **Common Attributes**. From there you can change its content.

Edit Texts

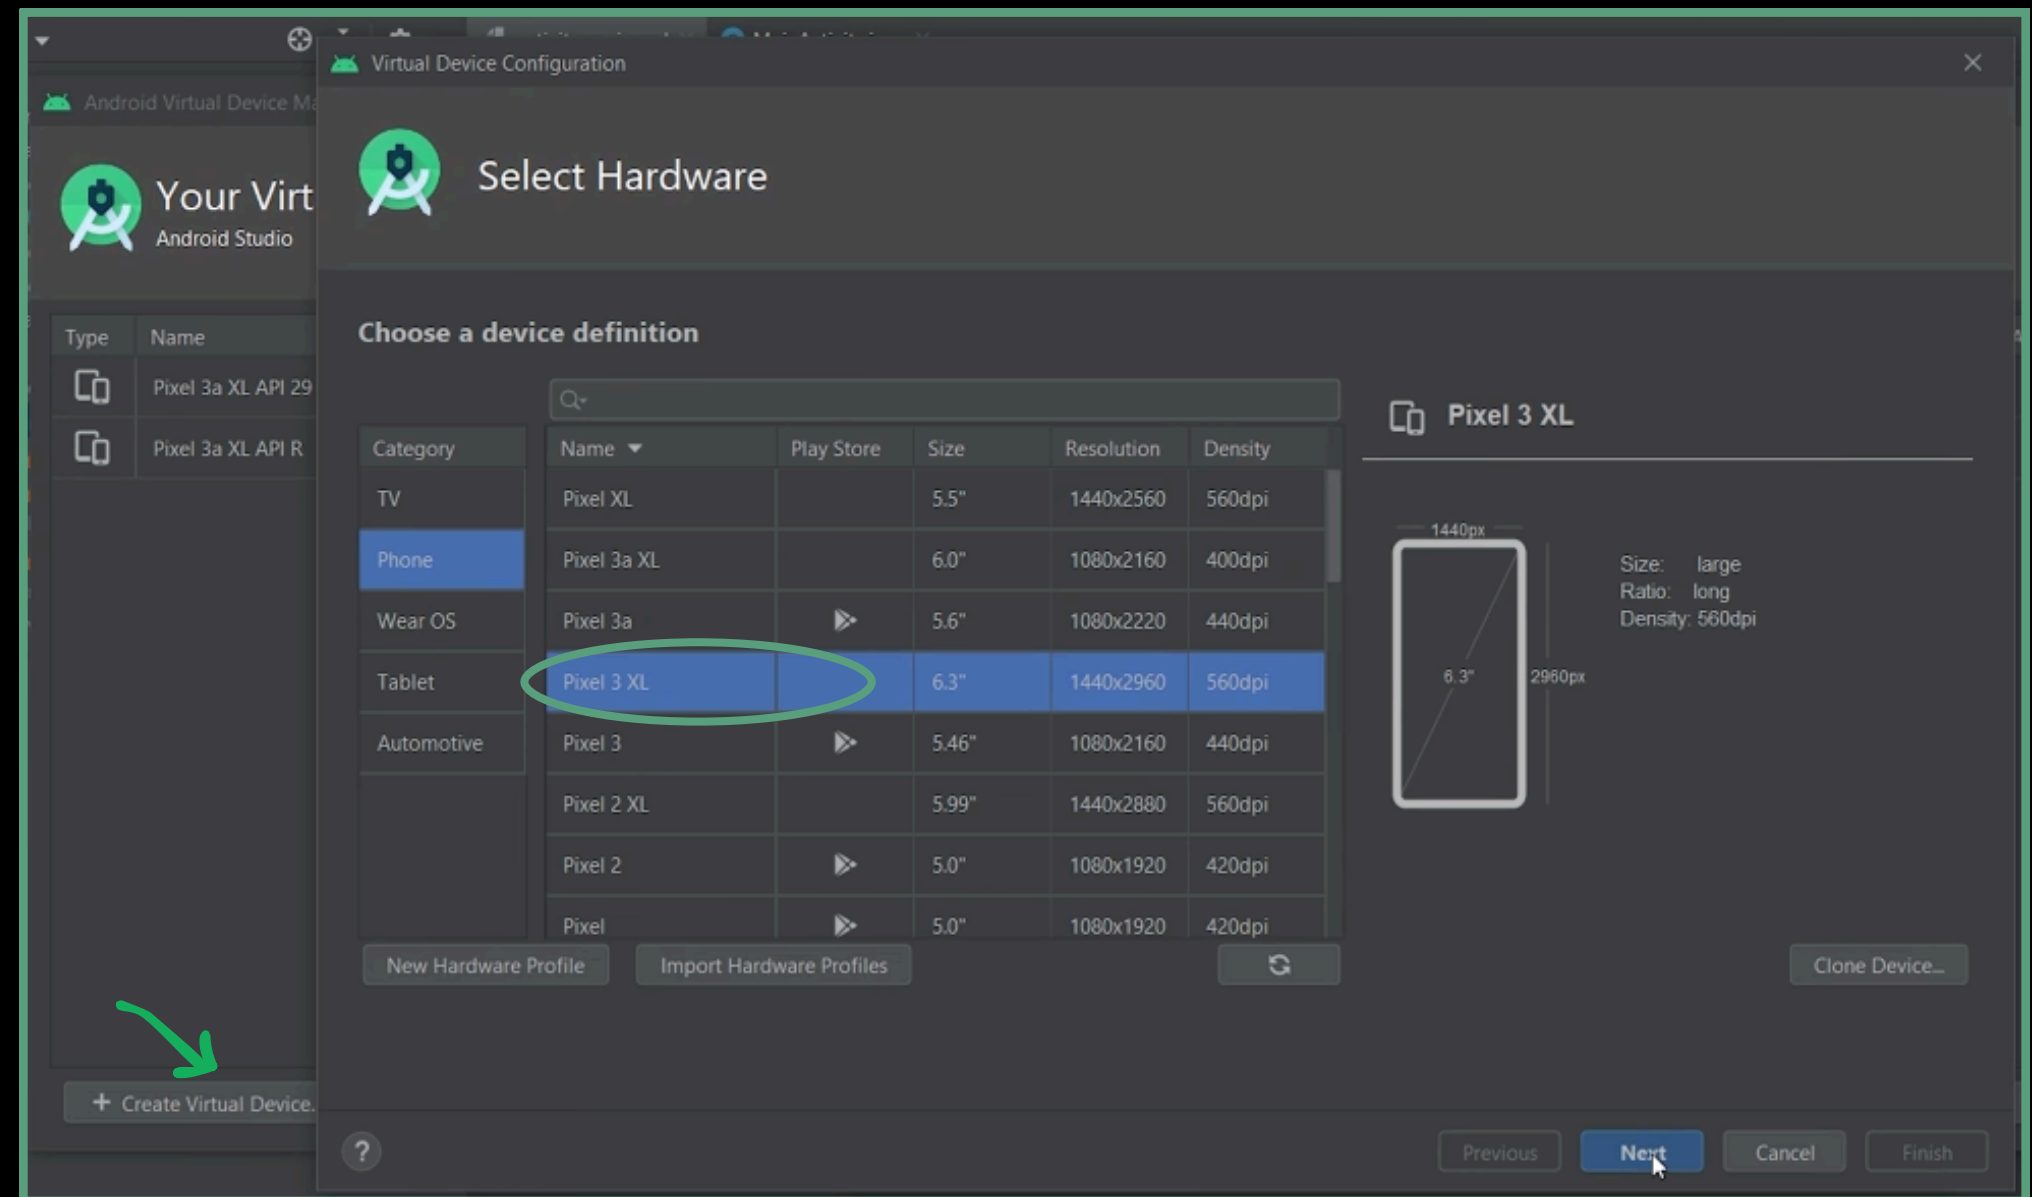

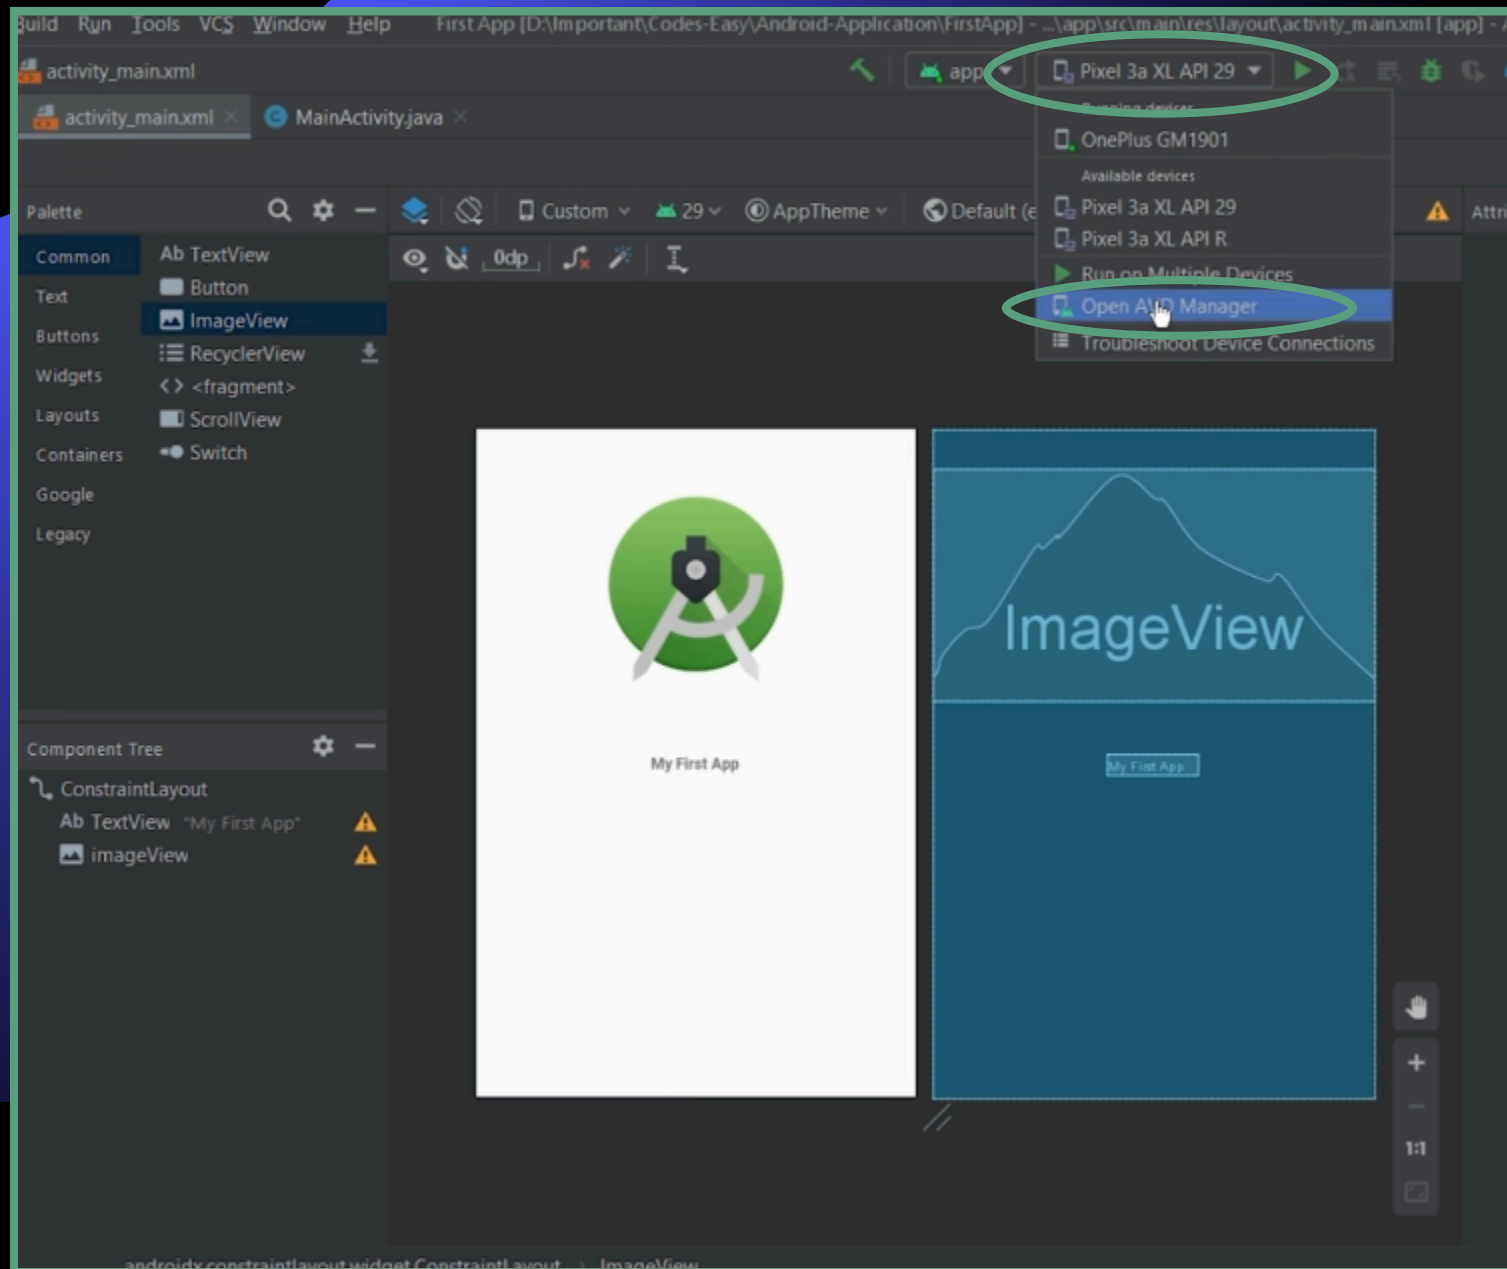

- To edit the text via code, go to this icon

Create Virtual Device

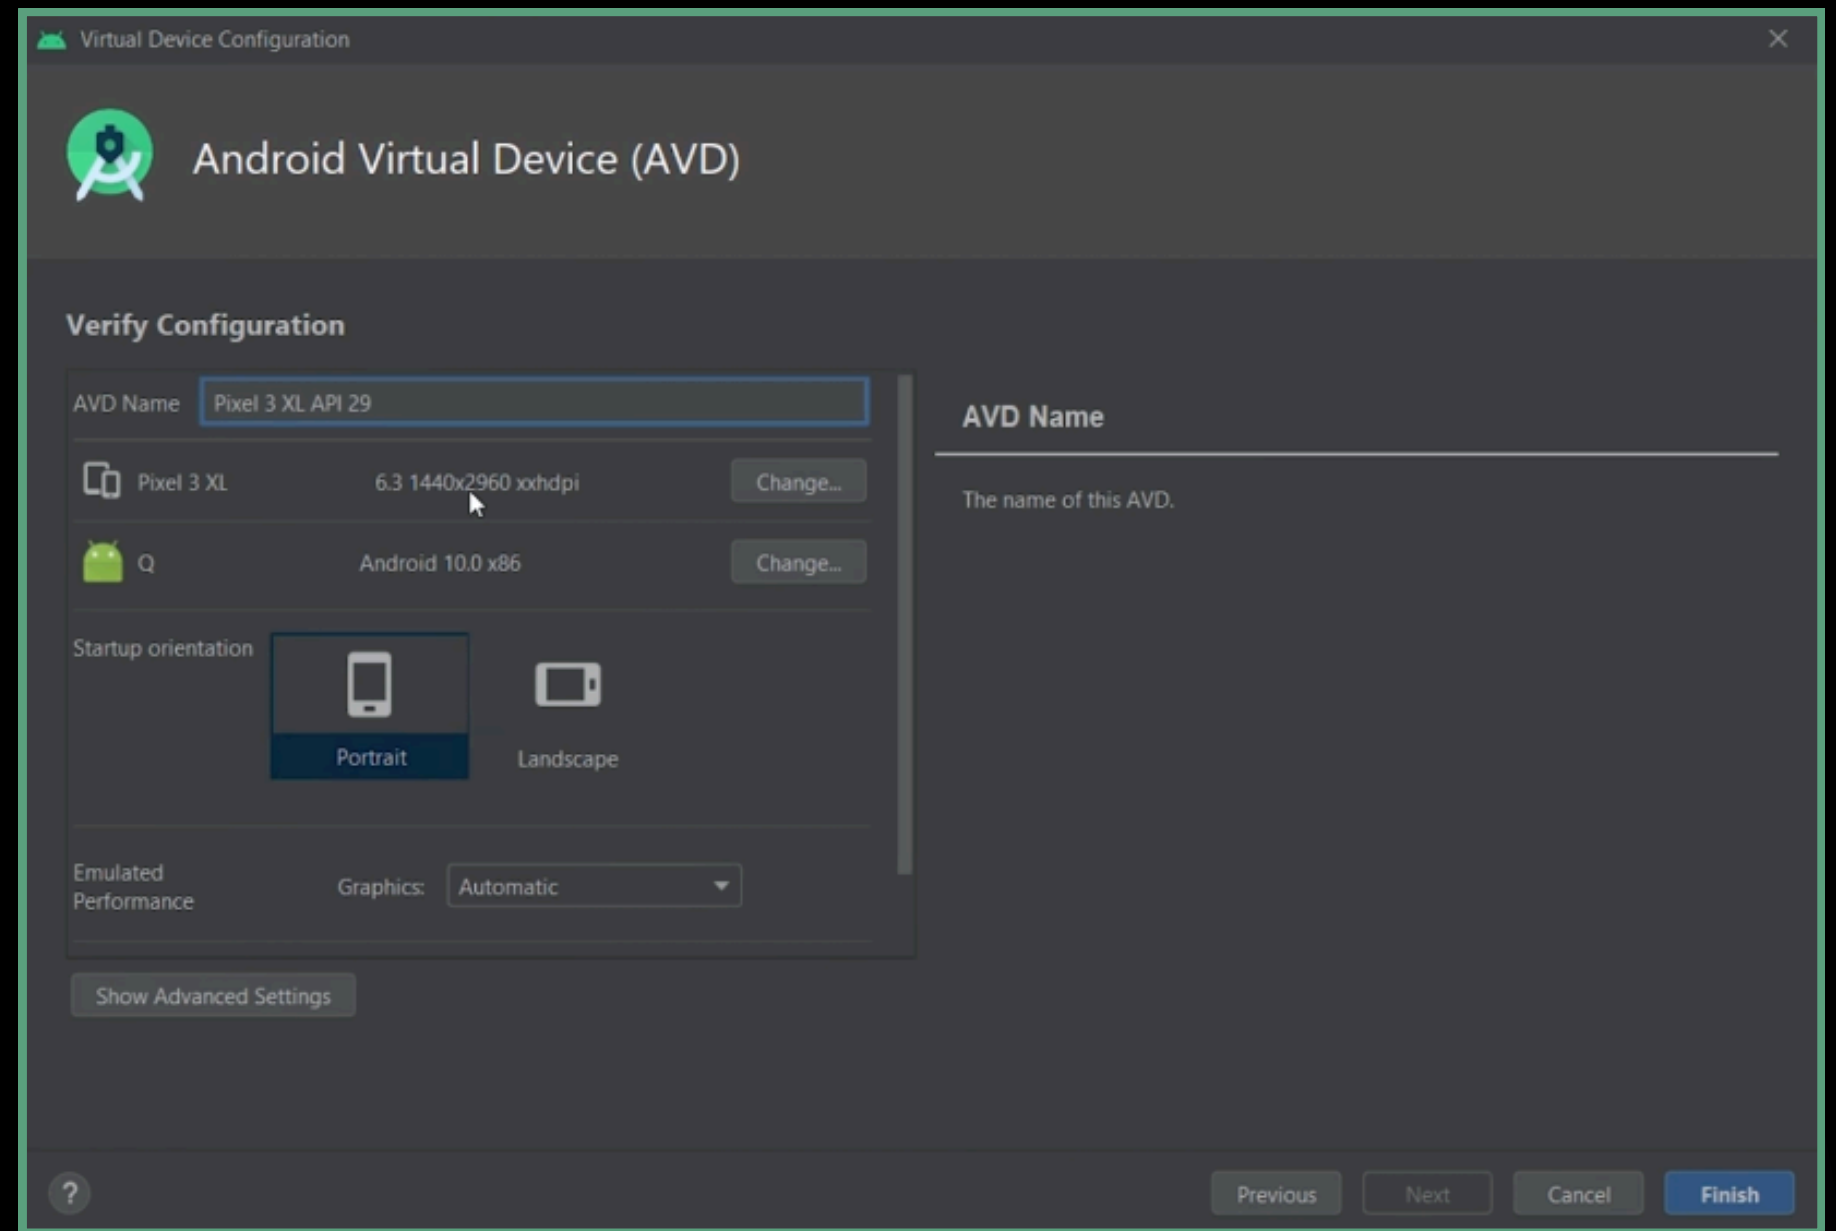

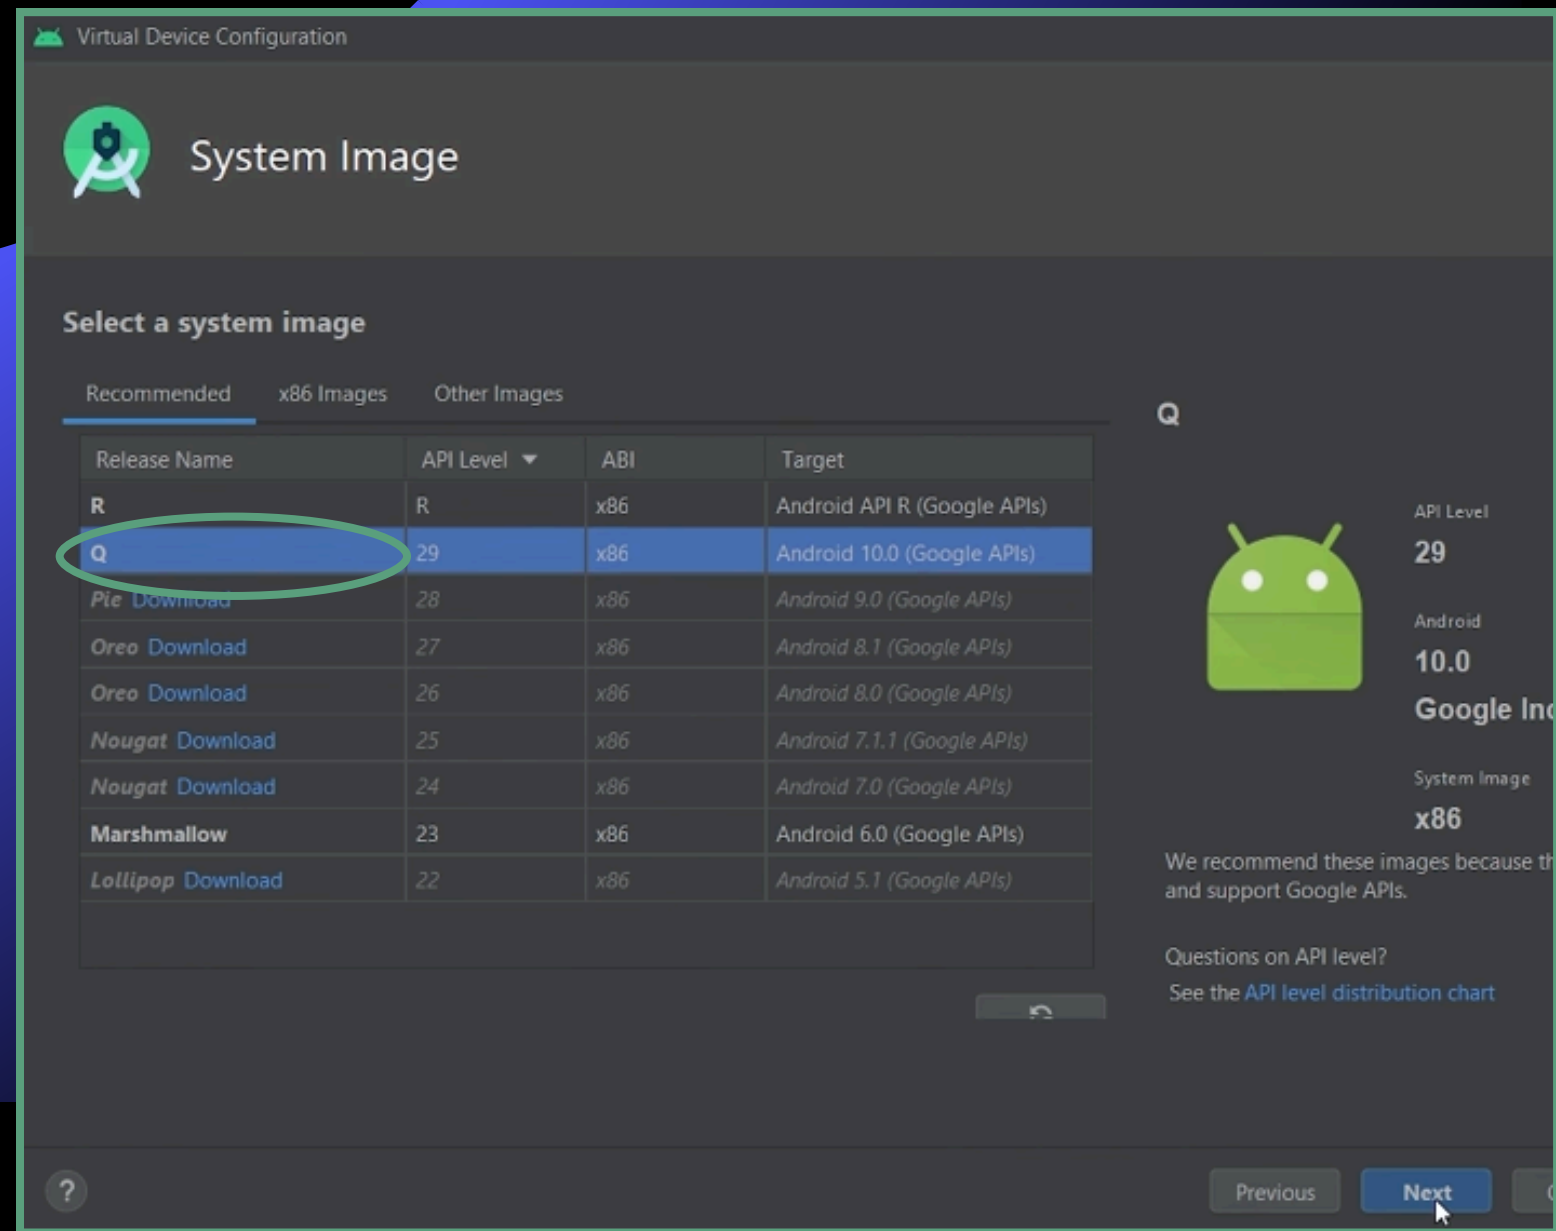

- Select devices here then Open AVD Manager

- Create Virtual Device and then this window will pop out which allows you to select what kind of device you would like the program to run

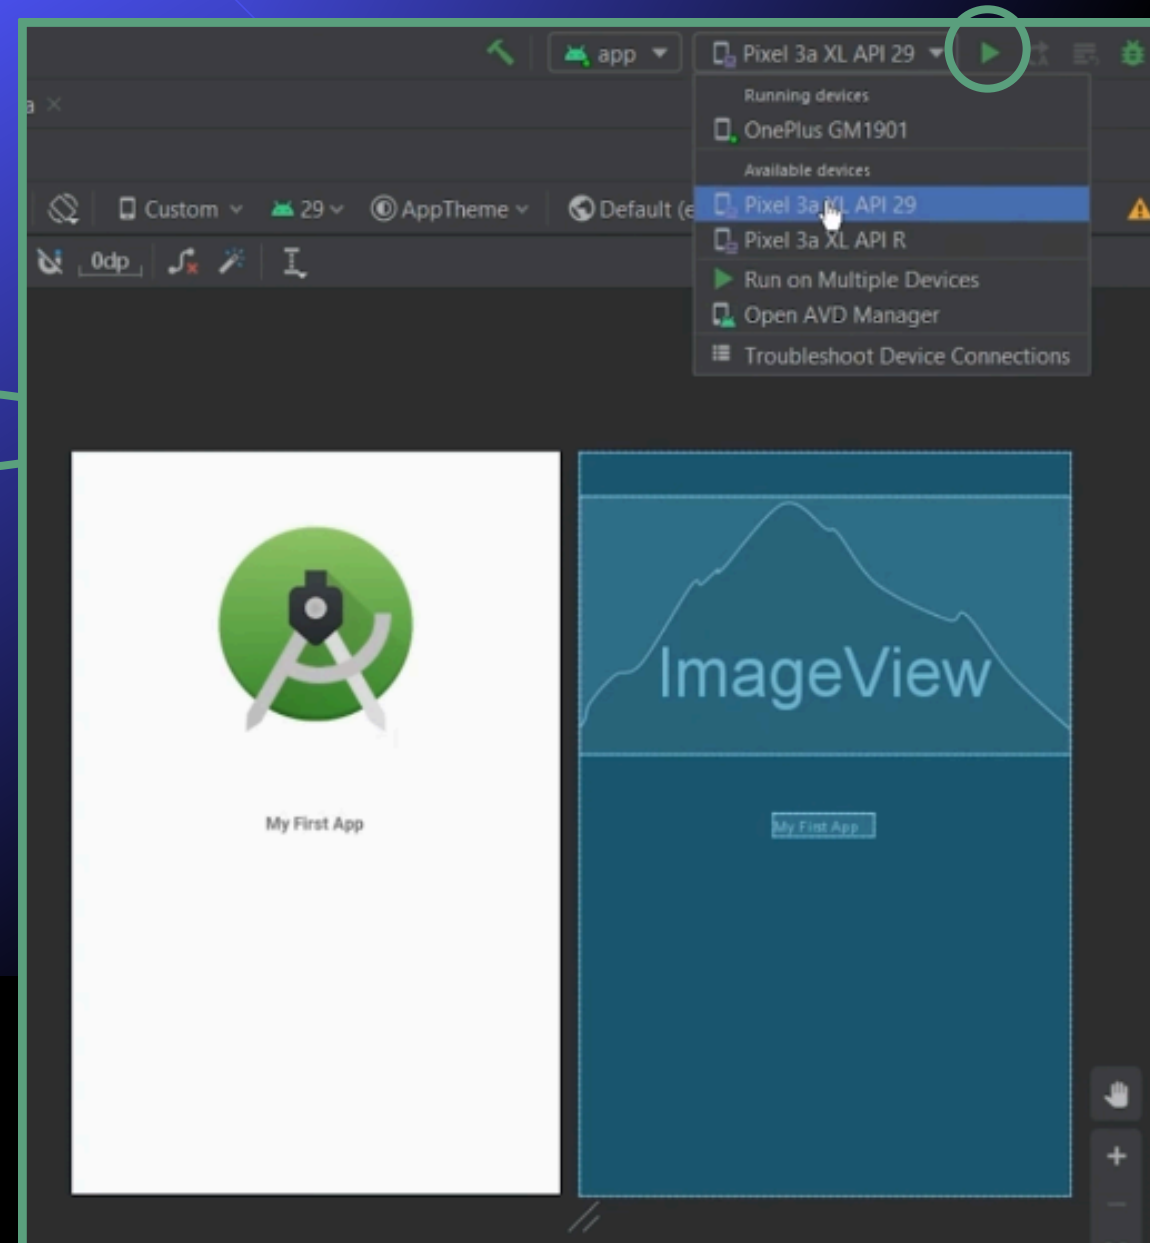

Create Virtual Device

- Select your System Image but for now, choose this. Then Next.
- Do final configurations here (rename etc.). Then Finish

Run the Program on the Emulator Device

- Select the Device First then click the Play button to run the program

- Now you can see the preview of the app in the emulator.
